

There is an *Oil Pull* Tractor for the 160 Acre Farm
as Well as for the Thousand Acre Ranch

Now \$2200 and up

Till the Soil with Oil Instead of Toil

Operate your farm on a manufacturing basis—watch your cost of production. If you farm 160 acres or more and plow with horses, you pay three times too much. Let us prove it—not only with our figures, but with the figures of practical farmers like yourself, who have farmed under the same conditions that you are farming, but who now farm with the *Oil Pull*. This is the day of traction engine plowing for every farmer. The quarter-section man can now compete on cost of crops with the man operating thousands of acres.

Because the *Oil Pull* has solved the problems of first investment, cost of fuel, reliable action, simplicity of operation, freedom from repair troubles and by affording you a general purpose power plant throughout the year.

Two good sized
boys with the Type
"F" *Oil Pull* will do as
much work as 10
or 12 horses and 4
men will do in a day.

For Plowing, Seeding, Harvesting,
Threshing, Hulling, Husking, Shred-
ding, Hulling, Road-Making, Pumping

For all purposes needing
Traction or Belt Power

The *Oil Pull* will work
as well in a 20-
acre field as on the
100-acre tract.

Sixty Years Experience Your Benefit

When you get an *Oil Pull* you get the result of 60 years of engine building experience. Year by year we've been working toward the engine you want. All these years the name Rumely has stood the nearest to perfection in farm tractors. At last the problem was completely solved—the oil-burning engine was perfected. This is the engine we want you to know all about—the only tractor which operates successfully at all loads with the cheapest, safest, most convenient fuel. Every part of the *Oil Pull* is constructed on the principle that you are not a mechanic—that you can't make fine adjustments—that you demand simplicity—freedom from "tinkering," delays and repairs. The *Oil Pull* is built for hard work, rough work, tremendous strains and many years of this kind of service. It is built in sizes to fit the 160-acre farm as well as the many thousand acre ranch.

Book and Expert Advice Free

Mr. L. W. Ellis, formerly of the U. S. Government Agricultural Dept., is now with this Company, giving his entire time toward helping farmers with their plowing and power problems. If you want personal advice, write Mr. Ellis. This service is free. Send your name and address on the coupon or a postal for a free copy of "Toiling and Tilling the Soil." Send for the book NOW.
