

A CRIME

will be committed if you raise a crop and fail to provide means to thresh it in the shortest time, and at the least possible expense.

A Garden City Feeder

attached to your Separator will feed it so evenly there will be no break-downs nor frequent stops, no matter how the grain is piled into the feeder. Every bushel will be saved and put in the bin, not in the straw pile or scattered on the ground.

Even and regular feeding must be done to save the grain. The Garden City Feeder is the only Band-Cutter and Self-Feeder on the market that overcomes the evil results of irregular and spasmodic pitching. It corrects the errors of the pitchers, and makes threshing a pleasure, and at the same time saves the grain and makes money for you.

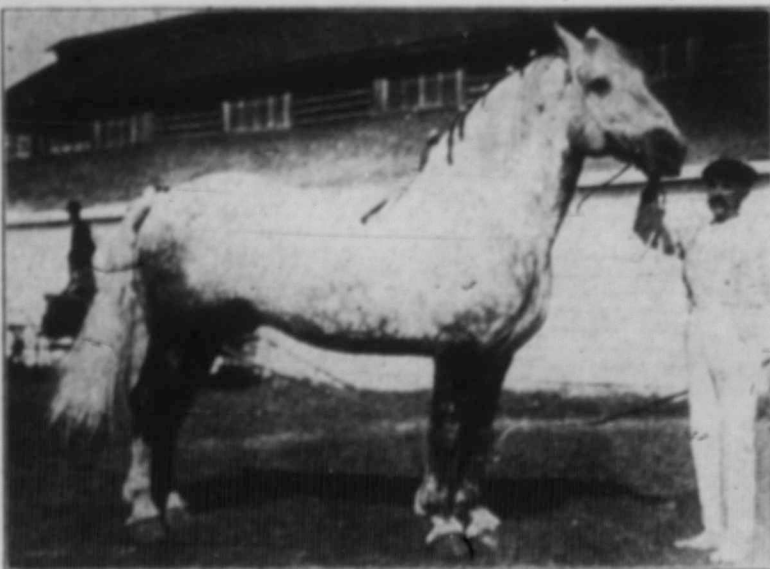

All orders subject to cancellation in case of crop failure. Order today. Do not delay. Satisfaction Guaranteed. Remember, we are sole agents for the Caswell Belt Guide.

Dictator (3773) 40785

Champion Percheron stallion "Dictator," so well known at the Michigan State Fairs and all the Big Shows in the East. Even that great reserve champion Clydesdale "Marathon" could not defeat "Dictator" for the best draught stallion any age or breed. "Dictator" is now owned by Henderson & Chapman of Tugaske and Central Butte, Sask., and is the only horse in this district to stand at a straight \$25.00 service fee. "Dictator" will be on hand on July 24 at Central Butte Fair and again compete for the best draught stallion any breed. It will be clubbed with the Government in 1919.

HENDERSON & CHAPMAN

A Warm House

--Cheaply Constructed

If you want economy in the cost of your house you can better afford to use cheaper lumber and a better sheathing paper. A properly constructed sheathing paper will keep the heat in and the cold wind and penetrating frost out.

Plain building paper (not tarred) is intended only to check the wind. It absorbs moisture like a sponge and besides being easily destroyed is of no assistance in checking frost.

Common tar paper (ordinary building paper saturated with tar) will resist wind and check frost as long as it is fresh. Tar, however, is a very volatile substance and evaporates fast. Paper treated with it dries out within a few months after being applied to the building, becoming dry and brittle and more porous even than the paper was before being so treated. In fact, tar paper is essentially of less value on a building than plain building paper. Proof of this may be seen in that architects never specify tar paper.

"SOVEREIGN" Sheathing Felt

(Trade Mark Registered)

Made in Canada from Start to Finish

This is the ideal building or sheathing material. It is made from rag felt, not common paper. It is treated with asphalt and tar. Rag Felt has higher absorbing properties than any kind of paper made and so contains the maximum amount of moisture and frost-resisting material. It also offers the greatest strength and resistance to the wind.

Asphalt differs from tar in being a mineral substance. It is not volatile and will not evaporate. Substances treated with it are odorless, germ and vermin-proof, are hygienic and sanitary.

"SOVEREIGN" SHEATHING FELT will last as long as your building—will remain permanently fresh and will give you a wind-proof, moisture-proof and frost-proof house. Send for our new booklet, "Why Buildings Properly Sheathed are Easily Heated." It explains the How and Why. On request we will also send free samples of "SOVEREIGN" SHEATHING FELT or of our other asphalt-treated building materials, such as the bar-old Processed Roofing, No. 10 Roof Wallboard or Asphalt Slate Surfaced Shingles.

Write today for these samples and this interesting and instructive booklet. They will demonstrate how you can add to the comfort of your home and at the same time reduce your fuel bills.
