

Farm Work Carried on in the City of Toronto.

A Township devoted exclusively to the production of vegetables and a little flowers and fruit is located in the city of Toronto. It is connected with the Broadview Boys' Institute and is managed entirely by the boys. They have elected their own reeve, councillors, path master, ward inspector and other officers. When united two years ago, 46 boys undertook to raise vegetables and produce. The venture proved so successful that last year 66 boys took charge of plots of land. The number has increased this year to 86 who fit in 94 plots. There are 12 large plots which are looked after jointly by all the boys, in which flowers are raised and experimental work conducted. The illustration shows the plots and some of the boys at work. The large boys work plots 10 x 40 feet in size and 12 small boys sections 1 x 8 x 2 feet. Last fall a two days exhibition of the products of the institute was held which was attended on the last day by 1200 people.
