

The true test of mechanical efficiency is found in the wear and tear of hard, every-day service. Tried by this exacting test, JOHN T. HEPBURN'S

Scotch Derricks

have never yet failed to make good. They are designed and built for hard work—under rigid inspection—from the finest materials only—with honest workmanship; built entirely in our own shops. They combine high efficiency and utmost safety, with low operating cost—effecting a labor saving of fully 50 per cent. over the old style derrick.

Write to-day for full particulars and quotations. By placing your order now you will secure early delivery.

STORAGE TANKS

for all purposes and with any capacity from 300 gallons to 100,000 gallons.

These tanks are all built of the finest pine, cypress or fir. The staves are all bevelled to insure tight joints, and the hooping is all guaranteed. We have erected hundreds of these tanks for the Canadian railways.

Get our specifications before ordering your tank.

HYDRAULIC RAMS

These rams are very powerful and will raise water to practically any desired height. And their outstanding feature is that they will operate where other rams are standing still. A fall of two to three feet is all that is necessary. They are constructed to last, and practically no repairs are required after installation.
