

MULTIPLE WOOD-BORING MACHINE

The annexed cut represents M. L. Andrew & Company's patent improved combined straight and angle boring machine. Both spindles and table can be set either straight or to different angles to accommodate the most difficult boring. The machine is especially adapted to agricultural work, wagon, carriage, furniture and general manufacturing purposes. Machine is built in various sizes and with any number of spindles. Don't order any other make of machine until you have thoroughly investigated the merits of our machines.

"UNGUARDED SAWS CAUSED 20 PER CENT. OF ACCIDENTS IN ONTARIO MILLS AND FACTORIES." SO SAYS THE LAST ANNUAL REPORT OF THE FACTORY INSPECTORS.

Don't you realize that every day you delay in putting Jones Guards on your machines you are submitting yourselves to the danger of costly law suits as the result of accidents. Besides, you are not protecting your best workmen from being ruined for life.

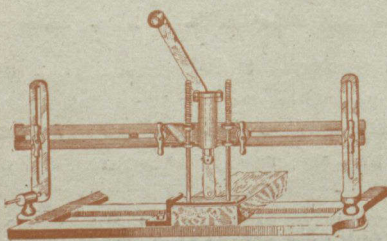

Pressure Shaper Guard
For Double and Single Spindles

Jones Safety Devices are recommended by Factory Inspectors and Insurance Companies as the best, and in many cases both in Canada and the United States they have protected employers from expensive law suits. All guards shipped on 30 days trial.

Jointer Guard
Dotted line shows it at side of
machine for rabbeting.
