

will turn out enough building elements for the construction of one hundred thousand square metres of actual housing space and eighteen thousand cubic metres of preassembled reinforced concrete construction elements. That means that Usinsk will be getting new schools, kindergartens and other social, recreational and everyday communal services facilities.

The new plant is rapidly being brought up to its projected output capacity. This year it will begin to produce construction elements for housing projects built to the specifications of the advanced 112 design series.
