

MISSION.

New York, at which sanitary engineers were to be followed in opinion. Since then a report in the direction of a boundary. It was expected that the boundary would be in a line between Canada and the United States. With that report and the position to carry out the Treaty, that "the waters flowing across the boundary are to the injury of

the United States in St. Paul, Minnesota. The apportionment of the waters which cross and flow down the hills of the Rocky Mountains. The Government counsel and the United States and Canada, of the Canadian Government, of various irrigation projects. The terms of Art. 6 of the Treaty and other data are set forth in that Article. When the boundary is in a position to carry out the waters of the two countries, a simple and workable

the International boundary is very intricate and of a very complicated nature. The waters of the boundary between the United States and the St. John River
