

Hypertrichosis or Superfluous Hair.

An excessive or unnatural growth of hair on the face is a deformity which is very frequently observed, and there are hundreds of ladies in every city who resort to the use of depilatories or tweezers to conceal the fact that they have, or could have, a luxuriant beard or moustache.

WHAT IS ELECTROLYSIS and What Will it Do?

Electrolysis means the decomposition of a substance by means of a continual current of electricity passing through it; this treatment for the destruction of superfluous hair is no longer an experiment. It is reliable, is endorsed by physicians, and skilfully and scientifically applied has proved itself to be a positive method for permanently and harmlessly removing any growth of hair.

Miss Moote, who has charge of this department, is considered one of the most skilful practitioners in America, and guarantees satisfaction in every case.

Any LIQUID or POWDER applied to a hairy surface were it strong enough to destroy roots of hairs, which are often 1-10 of an inch long, must of necessity destroy the tissues of the face for that depth and also between each hair. Therefore, you are cautioned to beware of all such remedies—which generally simply remove the hair, causing no discomfort at the time, but making it grow much stronger afterwards.

We have Treatments and Remedies for all blemishes and Defects of Hair, Face or Figure, such as Pimples, Blackheads, Freckles, Sallow Complexion, Acne, Eczema, Moth, Tan, Scars, Oily Skin, Coarse Pores, Offensive Breath, Excessive Perspiration, Wrinkles, Red Nose, Birthmarks, Etc. Corpulency Reduced. Scrawny Necks and Busts Developed. Bad Complexions Made Perfect. Thin Faded Faces Restored to Healthy Beauty. Moles and Warts Painlessly Removed Without Scar.

ANSWERS TO CORRESPONDENTS.

(Continued.)

F. A. B.:—Crinoline is cut like the sleeve pattern and it may extend to the wrist or elbow, as personal taste dictates.

ZOE:—The wearing of a small or large hat by a miss depends entirely upon the becomingness of either. Exaggerated shapes are not good form, but if a person has large features, a small shape would make her appear ridiculous, while a large shape worn by a small-featured person would be equally incongruous. One can always attain the becoming in hats by attentively studying the features, and many defects may be cured or, at least, alleviated by the selection of proper headgear.

ESSIE A.:—A blouse-waist of black-and-white checked taffeta having a crush collar of plum-colored velvet will go well with goods like your sample, which is on the plum shade.

A YOUNG HOUSEKEEPER:—To clean alabaster, proceed as follows: Soap well and wash with hot water. If stained, apply fuller's earth, pipe-clay or whiting for three or four hours, then wash off. If very dirty and stained, first wash with aquafortis diluted with water. Or: Take ground pumice stone of the finest quality, and mix with verjuice; let it stand for two hours, then dip in a sponge and rub the alabaster with it; wash with a linen cloth and fresh water, and dry with clean linen rags. Any kind of marble may be cleaned in the same manner. Full directions for cleansing lace curtains were given in the article entitled "Household Renovation" which appeared in the January DELINEATOR. Use fine cambric or saten for lining your silk petticoat, developing the latter by pattern No. 4318, price 1s. or 25 cents. "The Art of Garment Cutting, Fitting and Making," published by us at 2s. or 50 cents, is a complete guide to household sewing and will prove helpful to both amateur and professional.

MAE:—A celebrated physician prescribes the following for checking profuse perspiration: Place three or four-ounces of oak bark in a pint of boiling water and boil for ten minutes; add half of this to a basinful of hot water, to which also add a dessert-spoonful of powdered borax and the same quantity of fine starch. Sponge the affected parts night and morning with this preparation.

OLD SUBSCRIBER:—It is bad form to congratulate a bride. Congratulations are for the groom, and best wishes for her future happiness are offered the bride.

IF AFFLICTED WITH OR TUMORS, WRITE FOR BOOK AND MODE OF TREATMENT TO DR. MCMICHAEL, 75. W. TUPPER ST., BUFFALO, N. Y.

DIPHTHERIA

and any infectious disease which finds a lodgment in the throat is absolutely prevented by the use of Dr. Emil Rottger's First Cross Antiseptic Throat Lozenges. The non-toxic compound originated by this eminent German specialist has been subjected to the most rigid tests known to science, and has been incontestably shown to have a more potent effect on pyogenic microbes than solutions of 1 in 1,000 Iodine. Combined with sugar and aromatics, and dispensed in the form of a lozenge, it is as agreeable as a choice confection. While slowly dissolving in the mouth it comes in contact with every part of the throat and renders it proof against the microbe germ which originates infection. Although three or four lozenges are quite enough to use in the 24 hours, the taking of an entire box by one child at once would not produce harmful results. To mothers, whose natural anxiety for the safety of their little ones makes them uneasy when throat troubles are prevalent, they are an inestimable boon, as they fully sustain the old truism that "prevention is better than cure." In order to bring them into general use by the poor as well as by the rich, they have been put up in boxes containing 60 lozenges to retail at 25c. or five boxes for \$1. Mail orders, enclosing either of these amounts, sent to the Canadian agents, The Toronto Pharmaceutical Co., Toronto, Can., will receive prompt attention.
