

Football Bears - Huskie Hunting Saturday

Tomorrow afternoon in Saskatoon the University of Alberta Golden Bears and the University of Saskatchewan Huskies meet in the final game of the Western Intercollegiate Football schedule.

The game means absolutely nothing as the Bears have already wrapped up the championship and Saskatchewan has clinched the basement. About all that is at stake is a little prestige, for the Green and Gold is shooting for an undefeated season and the Huskies are still looking for their first win: in fact the Huskies have yet to score a point in this season.

YET TO SCORE

Golden Bears will be entering the fray in great shape physically but the mental outlook is not so rosy. The players are finding it tough to get up for a nothing game against a team which has yet to score.

Not so with the Huskies though, as they are virtually breathing fire. Coach Barry Roseborough will have little trouble finding reasons to make his gang real mean. First, the boys from the wheat province haven't

beaten an Alberta team in 20 years or so and have had some very humiliating defeats shoved down their throats in recent times.

DIRTY PLAY

Secondly, there have been dire cries of foul play since the first meeting as the Saskatchewan press at least seems to think the Bears play dirty football. One fourth estater of the U of S Sheaf thinks the Bears aren't too good at football but they sure are

good at dirty play.

And lastly, there is that bit about not scoring; no one seems to be able to remember a team that went through a full conference season without scoring a point, dirty or not.

About all that is at stake for the Bears besides their unbeaten record is the scoring championship. It is open to practically all the members of the backfield as all have shared in the scoring this year. Tomorrow should tell the tale.

FOOTBALL FOLLOW THROUGH

The irons are still in the fire for the East-West final but apparently the coals are becoming quite cool. It seems the Easterners are not too keen on the idea but if McGill Redmen should win out it may be on. Also there appears to be a little matter of a few thousand dollars to sponsor the game.

Too had the game tomorrow is being played in the afternoon as both teams will miss the Stampeder-Eskimo go around.

Somehow, I don't think that I'll ever win a popularity contest at U of A. Last Friday, two stalwarts of the Debating Society proved that the Gateway is garbage mainly because 'Scrabble', this high-minded column, is, in fact, garbage. Loudly quoting out of context (a trick that I thought was an exclusive Gateway feature) and lamenting such GHASTLY words as Hell and Damn, these holier-than-thou (as in 'full of holes', that is) paragons of the spoken and written word condemned everything that was written in The Gateway on the basis of my column and myself pois'nally. What, me worry? They expressed concern over the fact that this column is biased. Have you ever read a newspaper column that is not biased? If you did, then it

was not a column.

Secondly, look at the 'masthead': "Opinions expressed by columnists in this paper are not necessarily those of The Gateway or members of its staff." Thirdly, loud critics of The Gateway who, methinks, have ambition, invariably use the letter section for their unpaid political announcements. I guess they like having their names mixed with garbage!

Put away the glad hand and the quick-but-ready smile, guys. Rushing is over for another year, thank God. Knock down the air castle of brotherhood and get out the blank cheques and the paddles. The degree of popularity is directly proportional to the shine on the fraternity pin. And there is always good old, wishy-washy IFC . . . democracy in action! The women's fraternities held 'discussion groups' this year. The men's fraternities called them 'seminars'. But no mater which way you spell it, it is still a ding session. And the same people that couldn't, can't, can they? Seriously, I believe that fraternities at the U of A can offer a great deal (and here I mean more than parties), but if the individual few who stick their noses in the air and sneer at the mere mortals who DON'T BELONG continue to do so, they will continue to give fraternities a bad name at this University and force people to make comments like those above. The comments stand.

Latest from the swimming pool:—the officials in charge are obviously under the impression that they can increase the specific gravity of the water in the pool by adding chlorine . . . great gobs of the stuff . . . with the result that a large number of students are groping their way to the Sick Bay with eye complaints. Rather than change the water once in a while, they just add more chlorine. Like, logic, man. Sorer than the average corneal ulcer, Boo-Boo!

OFFICIAL NOTICE

Written applications will be received by the undersigned until 6 p.m. Tuesday, November 8, 1960 for the following positions: Two delegates to attend the "McGill Conference on World Affairs". This year's theme—"Democracy in a Changing World." Conference to be held at McGill University, Montreal, from Nov. 21 through to Nov. 24. Please state interests, qualifications and other facts which you may consider to be relevant for selection committee.

Careers

WITH
**CANADIAN CHEMICAL
COMPANY, LIMITED**

This advertisement will be of most interest to graduates in chemistry, chemical, mechanical and electrical engineering and engineering physics.

What interests you most about a career? *Opportunity* should. Opportunity not only for advancement, but opportunity for professional growth through varied and interesting experience. We firmly believe in diversified experience and, luckily, we can offer it in our fully integrated operation. We find it's best for you (makes life more interesting and provides greater opportunity) and best for us (we end up with senior people who are fully experienced in our business). Now, let's have a crack at answering some of your questions.

What do we do? Canadian Chemical Company produces basic organic chemicals, cellulose acetate flake and acetate yarns, fibres and staple.

Where do we do it? At Edmonton. We have three plants on a 430 acre site. The first produces chemicals—alcohol, ester and ketone solvents, acetic acid, glycols, pentaerythritol, formaldehyde and other organics. The second produces cellulose acetate flake. The third, acetate and Arnel yarns and fibres.

Sales offices are located in Montreal, Toronto and Vancouver.

What is our future? Very bright. (It just happens to be true.) We think of ourselves as a young, progressive, fast-growing Canadian firm with world-wide affiliations. The record bears this out. So does the operation of our Edmonton plant. And the fact that our engineering department is one of the largest and most diversified in Canada.

Our raw materials are basic Canadian natural resources: petroleum by-products from Alberta and cellulose from the forests of British Columbia. Our markets are world-wide, and through our affiliates we have a strong alliance with companies in the textile, chemical and plastics industries:

What would you do? As a qualified chemist or engineer you could be working on *product development, research, process engineering, plant design, construction* or some aspect of production. This is exciting work in many completely new fields. As a chemist or chemical engineer you could choose also a career in *sales or technical service*.

What else should you know about us? Lots more. You can get more information and literature by writing to Department "A" at 1600 Dorchester Blvd. West, Montreal 25, Quebec. Or to the Personnel Department, Canadian Chemical Company, Limited, P.O. Box 99, Edmonton, Alberta.
