

IDEAL GREEN FEED SILOS

ARE VERY DURABLE

Only Canadian Spruce lumber especially selected for our own use is employed. This is saturated with a solution which prevents rot and decay and reduces the tendency of the staves to swell or shrink and adds two to three times to the life of the Silo.

Each Silo hooped with heavy round iron hoops every 30 inches apart. Only malleable iron lugs are used.

We want you to have our Ideal Green Feed Silo Book

If you are a cow owner a postal card request will bring you the book free of charge.

For Sale—Jersey cows and heifers and bulls for exportation. All pedigree and Herd-book stock. For further particulars apply to **A. T. SPRINGATE, Breeder and Exporter, Gorey, Jersey, Europe.**

Questions and Answers. Miscellaneous.

Weed in Alfalfa.

I am sending a plant found in my alfalfa field. Is it a species of alfalfa?
J. C. B.

Ans.—The specimen arrived in rather poor condition, but it is clearly not a species of alfalfa. It is likely rocket, a weed quite common in some samples of European alfalfa.

Pasture for Calves.

Having plowed the ground in the orchard, I would like to sow something suitable for calf pasture that would be ready for use in a few months. As I am a constant reader of "The Farmer's Advocate," kindly let me know the kind of seed, when to sow, and how thick to sow?
C. A. M.

Ans.—At this date, probably you could not do better than sow oats, or a mixture of oats and peas. Prof. Zavitz's annual pasture mixture would also be good, and the clover would come on in the fall. Sow 51 lbs. of oats, 30 lbs. of Early Amber sugar cane, and 7 lbs. of red clover per acre. It comes on fast, and should be ready for pasture in six weeks.

Protection from Lightning.

I intend to put four zinc ventilators on my barn, 3½ feet in height. How would it do to put a copper wire along top of ventilators, and down each end of barn into damp ground? Would it do to put wire through steel fasteners on top of ventilator, or should they be made of copper? Would this make a good protection against lightning?
L. S.

Ans.—Almost any kind of metallic connection between a roof and the earth, furnishes a measure of protection from lightning. We would, however, recommend having wire laid along the ridge, and in contact with each ventilator, as it passes it, rather than the plan you suggest. Would also advise a cable of galvanized-iron wire instead of a single copper wire as conductor. In proportion to cost, iron is a more efficient and safer lightning conductor than copper. Fasteners should be of the same metal as the rod itself.
T. B.

Trouble with Rented Farm.

I have rented a stocked farm on a lease of three years. In the said lease, it is stated that I am paying rent for 10 cows, and that all stock is to be left as taken. The rent I am paying is \$275 per annum, which I consider rather high. The owner told me that all cows would freshen very early. The first instalment of the rent comes due September 1st. Now, when I came in possession of the farm I did not find 10 cows as stated, but 6 cows and 4 heifers coming two years old. I have been here now three months, and up to last week I have only had two cows milking but now I have four cows and two of the heifers, and will start the factory next week with this number, which will only bring me a small milk check. The landlord died the first day we came here, and now the farm is owned and managed by his widow (when I said managed, I mean in the way of paying taxes, etc.). Can I compel her to reduce my rent, or put me on fresh milkers; or, failing to do either, could I leave four heifers when my time is up?

A FARMER WHO WANTS JUSTICE.

Ans.—There seems to have been no stated time mentioned in the lease at which the cows were to freshen. Are all the heifers with calf, and due to drop calves this summer? If so, they could be called cows without much mistake. If all the cows and heifers produce calves in seasonable time, it is scarcely likely that you could get the rent reduced, or other cows substituted. We see no great objection to leaving in-calf heifers when your time is up, in the place of the four two-year-olds taken over when the place was rented, provided the landlord is satisfied they are as good as those leased. These matters you should be able to adjust between yourselves without trouble. If the lease says the same cattle must be returned as taken over, of course, it must be lived up to.

It isn't an easy job
holding them back from

Caldwell's Cream Sub-stitute Calf Meal

—it's the MODERN way
—the ECONOMICAL way
—the PROFITABLE way

of weaning up or raising calves for beef or to replenish your Dairy Herd and you can raise as fine calves with it as you can on whole milk. But—

Keep on selling the milk. Caldwell's Cream Substitute contains the same nutriment and costs far less. Ask your Feedman about it or write us.

THE CALDWELL FEED CO., LTD., DUNDAS, ONT.
