Cured of Piles After 20 Years
Many people have got the impression that piles can only be cured by a surgical operation, with all the attendant suffering, risk and expense. There is a safe way; by using Dr. Chase's Ointment.

Mr. John M. Bates, gardener, 81 Laurent, Que., writes: "I had piles for twenty years, and tried all kinds of ointments and medicines, but they did me no good. It was getting worse and suffering more from the dreadful itching all the time. I used three boxes of Dr. Chase's Ointment, and today I am perfectly cured. There has not been a sign of the old trouble for six months, and it leaves me in perfect health today, whereas I was in agony for about twenty years. I can highly recommend Dr. Chase's Ointment as a positive cure for piles. The entire assurance that the results will be entirely satisfactory. See a box at all druggists or Edmundson, Bates & Co., Limited, Toronto.

Misard's Liniment Lumberman's friend.

A Prayer.

Look not wealth, but power to take
And see the things I love aright.
Not years, but the wisdom that shall make
My life a profit and delight.

Look not that for us the plan
Of good and ill be set aside;
But that the common lot of man
In sober hours, and glad.

I know I may not always keep
My steps in places green and sweet,
Nor that the pathway of the deep
A place of safety for my feet.

But pray, that when the tempter's breath
Shall sweep across my way about,
I make no pilferings of my faith
In the accustomed sea of doubt.

And that, though I be able to know
How hard the moment pillow even,
Good angels still may come and go
About the steps of my dream.

I do not ask for love below,
That friends shall never be estranged;
But for the power of loving so,
My heart may keep its youth unchanged.

Deceptive Diets.

Visitors to London, and Londoners themselves, have become painfully aware within recent years that midday at St. Paul's is not, according to the public clocks, midday at Charing Cross, and generally neither coincides with Greenwich time.

A report on the happy-go-lucky clocks of the city has just been presented to the City Council by the city engineer, who points out that not one of the 29 church clocks in the city is synchronized from Greenwich, with the result that they all tell the time in their own way. Church clocks are notorious.

On the Continent, a municipal time service is kept in nearly every town, and this is considered quite as important and necessary as cleaning the streets and lighting the public lamps. In London the public clocks keep time willy-nilly. A walk from the west end yesterday along Champs-Élysées showed a marked difference there was in the time-keepers erected for public use. It was one o'clock at Piccadilly when people at Charing Cross believed they had still five minutes to live before the hour struck; at St. Paul's three minutes to the hour was chronicled, and in Champs-Élysées a public clock made it 12 exactly. It has become one of the side-shows of London for visitors to be made aware how the public clocks differ, and many even take a walk from Charing Cross to Ludgate Hill for the mild excitement of detecting London's lying municipal time-keepers.

Mr. Hall Jones, of the Synchro Company, who has taken a keen interest in the matter for years, told one of our representatives that the faulty condition of city clocks and the remedy had been the subject of several papers read before the British Science Guild; and the manager of one of the largest watch dealers in London gave it as his opinion that it was almost impossible to get perfect time in every clock. Ever since the General Post Office an arrangement has been in force whereby Greenwich mean time by electric current is transmitted every day to wherever desired. But there is not at present the demand that might be expected for the correct time. On the other hand, a number of provincial towns have their corporation time services, which give clear signals throughout the district. A time gun is that most often used, but in London there is no signal, and to set one's watch by any public clock is fatal.

The fact that there is no municipal time service in the capital has caused much inconvenience. Few railway station clocks are at Greenwich time, and at the busy terminals there are dozens of suburbanities who miss their trains by the fatal minute owing to this. It is no use arguing with the porters. Probably all their watches are at different times, and the correct Greenwich time has little chance of survival among so many competitors.—London Standard.

"Pa, said little Tommy Binks one day, 'what's a weepal?'"
"A weepal, my son," Binks answered, "is something to fight with."

Then, Pa, said little Tommy, "is my own weepal?"

How to Be Educated.

LETTER OF MEN AND STUDY
TILL YOU KNOW THEM AND
THEN YOU WILL HAVE REAL
EDUCATION.

Education that men get after they are up is their real education. Education of men in this country is not getting themselves reading. What they know when they die will count on what they have learned since they stepped at school.

Education includes those that went to college, took the usual degrees, and finished that they were educated and they knew nothing.

Education is a preparation for the man who is to do the work of the world. It is not the advantage of direction by trained educators.

To begin, find out all about one important man.

Next, find out all about three important men. After that, find out all you can about three important women. You can't possibly find out all about any important woman, for the reason that men have done the writing of history, and hitherto they have not thought it worth while to write much of a serious kind about the women, and besides, they haven't thought it worth while to give the women a chance to do what they might really have done.

A man who reads for half an hour about this great man, a half an hour about that, and who at the end of the year has read about a hundred or more men, imagines he is getting an education. He is merely getting a smattering.

You ought to know the man whom

Electricity From Sunshine.

A sensation has been caused by the announcement of a French inventor that he has succeeded in producing a battery by which sunshine can be stored and transformed into electricity. There appears to be no doubt that his claim is well founded, but the invention would seem at present to have progressed no further than the experimental stage.

The inventor in question, though a Frenchman, has an English name, Charles Winter. His battery consists of two thin platinum plates, one of which is of iron, the other being in contact with a mercury salt. When placed in the sunlight a chemical change takes place in the contents of the battery and charges it with electricity. When the current is used up it leaves the battery in its original condition again, and it is ready for the life giving sunshine once more.

There are tremendous possibilities if the invention can be perfected. With a battery of five hundred large cells placed on the roof during the day it would, it is stated, be possible to store enough electricity, through the agency of the sunlight, to keep six lamps going at night. This has already been proved.

It is not absolutely necessary that there should be sunshine the whole time. Ordinary daylight will achieve the same result.

Torments of Tetter and Eczema Allevied.
The intense itching characteristic of eczema, tetter and like skin diseases is instantly alleviated by applying Chamberlain's Salve and many severe cases have been permanently cured by its use. For sale by all dealers.

The Setting Sun.
More joyful eyes look at the setting sun than at the rising sun. Burdens are laid down by the poor, when the sun consoles more than the rich. No star and no moon announce the rising sun; and does not the setting sun, like a lover, leave behind his image in the moon? I yearn towards him when he sets, not when he rises. It is more nearly of him to rise in his setting, and he is more gentle to the evening star, which, in rising, he warlike, annihilates. The moon and star of love glimmer after he has gone. He dies, and goes under the earth in order to make us blessed, and when I die, may he set half an hour later than I. I should like to take my leave of earth with the sun; but he should stay and look upon a little time longer than I.—Richter.

Direct Testimony.
Judge Aukam, presiding in the police court of the city of Washington, not long ago had as witness before him a man who stammered, the allegation being a sort of intermittent affair. The witness would stutter frightfully through two or three sentences, and then would sail through two or three more without hesitation. This interested the judge greatly, and finally he asked the witness:
"My good man, where do you stutter most?"
"Well, Your Honor," replied the afflicted man, "it do most when I am talking."

KING COLE TEA

You study, the two or three types of greatness upon whom your attention is concentrated, as the chemist knows the drop of sea water which he analyzes.

A man has said truly that if you know all about one drop of water, you know all about the ocean.

The solemn lady who sits beside you as you read this may tell you that you can't know all about the ocean unless you know all about the fishes in it and all about the pearls in the decayed oysters. But that is apart from the question.

The ocean is made of salt water. It is composed of oxygen, hydrogen and certain mineral salts. And if you know all about three drops of water from the Atlantic, the Pacific and some other ocean, you know all about all the oceans of the world.

Humanity is made up of certain qualities, certain spiritual faculties, certain instincts working subject to environment.

If you know all about three typical great men, you know all about one half of the human race. And if you know all about three great women, you know all about the other half of the human race.

Pick out with care the men and the women that you study.

Don't devote your attention to Alexander, Caesar and Napoleon—you know all about Napoleon; you know all about Alexander and Caesar. And if you know all about Caesar, you know practically everything about the other two. Those three simply represent ambition, exultation and battle.

In studying men take three different types. Begin with Napoleon if you choose. Then take some great scientist, then a great poet or musician.

If you understood thoroughly the character, the ambitions and the work of three such men as Napoleon, Darwin and Beethoven, if you studied them in every detail of their lives, private and public, and knew them thoroughly you would know all men.

And if you went back and studied others like them—Alexander for fighting, Aristotle for science and Pindar for art—you would find no important difference between your three great men of the old day and your three great men of to-day.

The important thing is to know three men absolutely thoroughly, and three women as nearly as possible thoroughly, then you will know the human race.

It is difficult to name three women, for as yet women have not had a chance.

Madame Roland is worth study, but more because of the conditions under which she lived than because

of her personality.

The sister of Herschel, the astronomer, exemplifying devotion to family and to truth, is worthy of study.

The famous Queen Christina of Sweden, who encouraged philosophy, who proved marvelously the power of woman to govern and then went all to pieces suddenly is also worth studying. Her life teaches you that women are good as long as men will let them alone.

Maria Theresa, who for so long protected her rights against the greatest soldier in Europe, is another life to study.

The life of the wonderful Olympian, mother of Alexander the Great, the wife of Philip, who had her husband and to put her son on the throne, or to give the power and the treasure to her lover, the lady who danced dressed in particular, with snakes around her, and who gave birth to one of the most wonderful men in the world, would be worth studying.

The quiet little old Scotch woman smoking a pipe at the corner of the fire, mother of Carlyle, or the broad-brimmed Corsican woman, Letizia Ramolino, who began having children when she was fourteen years old, and who gave Napoleon to Europe, the noble woman who saved this Republic and abolished slavery, because she gave devotion, education and good principle to her stepson, Lincoln, thousands of such women are on the pages of history. Study three of them, know all that you can about them.

Study three men. Know all that you can about each one. Give a year to one man, rather than giving a year to three hundred men—and you will know something. You will know the human race.—American.

Buttermilk.
An ordinary glass of buttermilk contains about as much nutriment as two ounces of bread, a good sized potato or a half pint of oysters, says a bulletin of the United States department of agriculture. It thus contains about the same food constituents as skimmilk, but it has an added hygienic value because the protein is more easily digested than the protein in skimmilk and therefore is often prescribed by physicians for children and invalids, especially those suffering from intestinal trouble.

Protein, being the most costly of food ingredients, is the one most likely to be lacking in inexpensive meals, and this is the nutriment skimmilk and buttermilk supply in a cheap and useful form, and when taken with bread or used in cooking they form a very nutritious addition to the diet. Two and one half quarts of skimmilk or buttermilk contain about the same amount of protein as one pound of round steak and costs about one-quarter as much. Two quarts of milk have a greater nutritive value than one quart of oysters.

The nutrient in the form of oysters would cost 30 to 50 cents, while the skimmilk or buttermilk would have a value on the farm of from 2 to 4 cents.

Slighting a Duty.
"Here in this back shop you haven't made things look very neat," said a merchant to a young clerk.

"Well, I thought it was good enough for back here."

"That won't do," said the merchant sharply, and then added in a kinder tone. "You must get that kind of idea out of your head, my boy, if you hope to succeed in life. That kind of 'good enough' isn't better than 'bad enough'."

And the merchant made the boy go and do the work all over again.

The girls who do not sweep in the corners or dust under things, and the boys who dispose of things as quickly as possible, and say that things will do if they are not well done, are the boys and girls who will not turn out to be useful men and women in this beautiful world which God has given us.

Here is a woman who speaks from personal knowledge and long experience, viz., Mrs. P. H. Droghda, of Wilson, Pa., who says: "I know from experience that Chamberlain's Cough Remedy is far superior to any other. For cough there is nothing that excels it. For sale by all dealers."

Hints to the Wise.
Keep a few pieces of camphor gum in your linen closet. It will aid in keeping the linen white.

If fish is wrapped well in oiled paper it will not impart a flavor or odor to the other foodstuffs in the refrigerator.

To revive and help potted plants that are drooping, place a teaspoonful of ammonia in three quarts of water and water the plants thoroughly with this mixture.

To clean plaster busts dip them in cold liquid starch. When dry the starched is brushed off and the dirt comes off with it, leaving the busts as clean and white as when new.

Little Elmer—Mamma, I saw a man down at the blacksmith's shop making a horse.

Mamma—You must be mistaken, Elmer.

Little Elmer—No, I'm not, mamma. He had the horse nearly finished when I came by. He was just walking on his feet.

Regal Flour

THIS is written with a full sense of our serious responsibility to housewives. It is not a glib argument. It is a solid fact. Nothing but truth would do with such easy proof offered you.

Fact:
A barrel of Regal Flour yields the almost quantity of bread. No flour in the world yields more. The loaves it bakes are white and light. Pastry of melting flakiness.

Proof:
Your dealer wants you to take your money back if Regal Flour proves below this promise. In that event we must pay him. On this understanding, isn't it only fair to yourself to test Regal at once?

Only One Way to Cure Rheumatism.

IT MUST BE TREATED THROUGH THE BLOOD AND THE POISONOUS ACID DRIVEN OUT.

The twinges and tortures of rheumatism are not due to cold, damp weather as so many persons suppose. Rheumatism comes from poisonous acids in the blood. This is a medical truth which every sufferer should realize. There is only one way to cure rheumatism—it must be treated through the blood. All the ingredients and rubbing and so-called electric treatment in the world will not cure rheumatism, and the sufferer who tries them is not only wasting money, but is allowing the trouble to become more deep-rooted in the system and harder to cure when the proper remedy is tried. Dr. Williams' Pink Pills always cure rheumatism because they go right to the root of the trouble in the blood. These Pills make the new rich blood of health, and in this way drive out the poisonous acid which causes rheumatism. Thousands of instances of cures might be given, among which is the following one. Mrs. G. R. Dainage, Cherry Valley, Ont., says: "I was attacked with rheumatism which gradually grew worse until I was confined to my bed. For about two weeks I had to be shifted and turned in bed as I was utterly unable to help myself. I was under the doctor's care and so far recovered that I was able to get up and move about, but the trouble still remained in my system. If I put my hands in cold water, or if I went out in the evening or in damp weather the trouble would return, and for four years I thus suffered from rheumatism, until I began to think it could not be driven out of my system. Finally I gave up all other medicines and began to use Dr. Williams' Pink Pills, and after using them for a couple of months I was completely cured and have not had a twinge of rheumatism since. I can recommend the Pills to anyone suffering from this trouble."

These Pills are sold by all medicine dealers or by mail at 50 cents a box or six boxes for \$2.50 from Dr. Williams' Medicine Co., Brockville, Ont.

There used to be a police judge in a Kentucky town who liked a toddy before his dinner. In the same town a newcomer started a distillery whose product before long was famous for its fire and its potency.

One day after court adjourned, the old judge was slipping a toddy at his favorite bar when a friend came in.

"Judge," said his friend, "did you ever try any of the new whiskey they are making down the street here?"

"No," said the judge, "but I reckon I've tried everybody that did try it."

When you have a bad cold you want the best medicine obtainable so as to cure it with as little delay as possible. Here is a druggist's opinion. I have sold Chamberlain's Cough Remedy for fifteen years," says Enoch Lollar of San Jose, Ind., "and consider it the best on the market." For sale by all dealers.

Little Elmer—Mamma, I saw a man down at the blacksmith's shop making a horse.

Mamma—You must be mistaken, Elmer.

Little Elmer—No, I'm not, mamma. He had the horse nearly finished when I came by. He was just walking on his feet.
