of lime around them.

Applying Fertilizers.

It is a great mistake in the application of concentrated fertilizers such as the superphosphates, bone meal, compact mass in the hill and near cut hay were found to contain a where the seed is planted. It should more actual food elements than the be remembered that the plants take 3500 lbs of late cut hay. This was at their food from the soil through their roots, and that those roots are quickly sent out into the surrounding soil after the plant starts into growth. While it is conceded that the elements

tilizer should be scattered into the At the end of the year, the apprensurrounding soil if we would have it tice is removed to a farm in another where the roots of the plants may part of the kingdom, and his third readily reach it. The old method of year is spent on a still different farm dropping with a spoon in a mass is an in a district where a different kind of Hollaw error of practice which should not be agriculture is practiced. The society continued. If liberal portions are gives each apprentice a number of applied it is better that the larger part be spread broadcast. It matters little what the crop is, the entire soil will be filled with its roots, and there prentices report to the society at which is said to be capable of firing eighty can be no danger but they will find stated intervals, and from these rethe fertilizer. - Maine Farmer.

Cabbage Insects.

when cabbage plants are first set out. ten or fifteen feet apart, covering the whole plat or field a few days before planting. The leaves to be employed are those of cabbage, turnip, lettuce or clover; a tablespoonful of Paris Green is mixed with a pail of water

cident to these dangers attending the purpose in civilization. The mare is capable of breeding at two years old; but as size, good form, and sound health are essential to the value of the horse, it privile to risk these by so early taxing nature heavily. The old English view is a safe one, that one or the other of the parents should be mature. If a young mare is to be mature. If a young mare is to be breed, the horse should not be less than
