

## EN - A R - C O MOTOR GREASE

### FOR DIFFERENTIALS, GEARS, TRANSMISSIONS ON MOTOR CARS AND TRACTORS

It is just as important that the best grease be used as it is important to use the best motor oil.

The power that actually drives your auto is transmitted to the transmission, differential and gears. A low-grade, soft-soap quality of grease, will not answer the purpose—it goes to pieces too quickly, giving no protection to prevent metal to metal contact.

Where gear meets gear, a grease of proper "body" and cushioning properties is needed to prevent metal to metal contact. **En-ar-co Motor Grease** does this. It "clings" to the metal. It is of proper consistency to permit moving parts to cut through, without effort—without wasting power. Does not "channel" or "cake." Soft and slippery enough to stand winter cold and does not thin out and go to pieces in summer heat.

#### Put up in 25-lb. Pails.

Also sold at service stations and at dealers in 5 and 10-lb. tins. Order direct if your dealer cannot supply you.

## BLACK BEAUTY AXLE GREASE THE BEST SUBSTITUTE FOR GOOD ROADS

It's the power behind the horse. Takes the "squeak" out of the old wagon—making it run easier and last longer.

There's no axle grease that equals "**Black Beauty**" because all the rich lubricating qualities of crude oil are retained in its manufacture, insuring a smooth, friction-free, wear-resisting axle. No compounds to clog and gum.

Twenty-five pound galvanized iron pail of **Black Beauty Axle Grease** shipped direct to you, if your local dealer cannot supply you.
