

The rich dark shades of the sable, and the snowy whiteness of the ermine, the great depth, and the peculiar, almost flowing softness of their skins and fur, have combined to gain them a preference in all countries, and in all ages of the world. In this age, they maintain the same relative estimate in regard to other furs, as when they marked the rank of the proud crusader, and were emblazoned in heraldry: but in most European nations, they are now worn promiscuously by the opulent.

The martens from Northern Asia and the Mountains of Kamschatka are much superior to the American, though in every pack of American marten skins there are a certain number which are beautifully shaded, and of a dark brown olive color, of great depth and richness.

Next these in value, for ornament and utility, are the sea otter, the mink, and the fiery fox.

The fiery fox is the bright red of Asia; is more brilliantly colored and of finer fur than any other of the genus. It is highly valued for the splendor of its red color and the fineness of its fur. It is the standard of value on the northeastern coast of Asia.

The sea otter, which was first introduced into commerce in 1725, from the Aleutian and Kurile Islands, is an exceedingly fine, soft, close fur, jet black in winter, with a silken gloss. The fur of the young animal is of a beautiful brown color. It is met with in great abundance in Bhering's Island, Kamschatka, Aleutian and Fox Islands, and is also taken on the opposite coasts of North America. It is sometimes taken with nets, but more frequently with clubs and spears. Their food is principally lobster and other shell-fish.

In 1780 furs had become so scarce in Siberia, that the supply was insufficient for the demand in the Asiatic countries. It was at this time that the sea otter was introduced into the markets for China. The skins brought such incredible prices, as to originate immediately several American and British expeditions to the northern islands of the Pacific, to Nootka Sound, and the northwest coast of America; but the Russians already had possession of the tract which they now hold, and had arranged a trade for the sea otter with the Koudek tribes. They do not engross the trade, however; the American northwest trading ships procure them, all along the coast, from the Indians.

At one period, the fur seals formed no inconsiderable item in the trade. South Georgia, in south latitude fifty-five degrees, discovered in 1675, was explored by Captain Cook in 1771. The Americans immediately commenced carrying seal skins thence to China, where they obtained the most exorbitant prices. One million two hundred thousand skins have been taken from that island alone, and nearly an equal number from the Island of Desolation, since they were first resorted to for the purpose of commerce.

The discovery of the South Shetlands, sixty-three degrees south latitude, in 1818, added surprisingly to the trade in fur seals. The number taken from the South Shetlands in 1821 and 1822 amounted to three hundred and twenty
