METEOROLOGICAL OBSERVATIONS TAKEN ON THE ROUTE FROM BETSIAMITES TO LAKE MISTASSINI, AND AT THE HUDSON BAY POST, MISTASSINI, AUGUST STH, 1884 TO AUGUST, 21ST, 1885.

The readings are those of a mercurial barometer until Pocember 17th, after that date a small ancroid was used.
The temperature is stated in degrees Faromieit.
The force of the wind is estimated according to Beaufort's scale. The proportion of sky covered by clouds is estimated on a scale of 0 to 10, 0 being a cloudless sky, 10 an overcast sky. The cluracter of the clouds is denoted by the usual letters or combinations of letters referring to Howard's classification.
