resist the action of heat he poured water to the extent of about two-thirds of the capacity of the vessel. He then added a small quantity of powder, andestirred up the mixture. He then added a small quantity of powder, andestirred up the mixture. He then added a lew drops of liquid, and in a few added a lew drops of liquid, and in a few accords combustion took place. The flame, which was perfectly white, and 5 or 6 inches in height, illuminated the room, and continued so for four hours. The author of the discovery stated that the cost of the mixture was less than one son, but that he considered the thing as yet in its infancy, and that, with a little time every objection that can be made to this new light for practical use would be removed.
