## farm and Household.

[Food and Health.] Diphtheria.

ITS CAUSE, NATURE AND CURE.

There may be an objection to calling diphtheria a winter disease pure and simple, but there is no doubt that this disease where it occurs is more malignant in the winter than in the summer season. Dirhtheria is really the child of malaria, cold and want of nutrition. Its quick action in detroying life shows that it has a disorganizing influence on the blood and consequently on the vital principle. We may say it disintegrates, attacking with its poison more particularly

Diphtheria is an illness of the rich and the poor, since there is neglect of health-measures in the houses of either, which may lead to the same results, though from a different ori-

Stagnant air, malarial air particles coupled with a low or insufficient diet and supplemented by drafts, or any quick succession of change of temture, creates the fungus growth of gently to produce good results. The diphtherial poison. It is the third New England Farmer says :combination which is required for it to attack the throat. This peculiar to lay out a little more work than low state of the temperature has the he can possibly do just at the very result of affecting the organs of the best time, and yet it is not unusual throat more particularly, the system to find ambitious, energetic men who having no strength, to resist it. Low have far more leisure than the lazy

there in March, 1881. The disease attention at the same time. had been engendered and had been mostly fostered in the lower ward. which was built on a swamp filled in

by sawdust. But the houses of the rich are as liable to promote diphtheria, when the poison has once reached them, if they are kept in a humid low state, from want of fresh air. Unfortu-

sewerage are also causes of diphthe rial poison, so are those of decaying vegetable matter, exhalations from swamps; low living and want of nutrition are the next associates, and finally a poor nervous state of the finally a poor nervous state of the system, such as is often brought children. Of this total, 1051 had about among well-to-do people by a reached Canada by way of the St.

The latest researches in America point out the diphtherial poison as that of a vegetable growth in the human body, called "microcoii."

The last light was thrown on it by the lecture of Prof. Horatio C. Wood, before the Academy of Naphram and Sciences Philadelphia who

The Ludington epidemic was so during 1880 was 1,023. terribly disastrous to little children. that it was considered the right spot

found in persons who had died with diphtheris. The "microcoii" were found to have so increased that they had choked up the internal organs of little children, especially affecting the the fishermen will do about as well. spleen and kidneys, where the plant The canning of mackerel is rapidly quently to fill up and choke the blood ed last year being 6.960 and this year vessels. In ultimate cases the member of the hold of the lease of the to be full of the little "Microcoii." The researches of these medical men have been tried, and are generally conseemed to be of the most thorough demned as a failure. The catch of her-kind, and as a remedial agent, it ring is put at 24,440, but the herring

tives, and in diphtheria, as in other importance, showing returns diseases, the best preventives are a than double those of all the other fish -13 constant watchful care of your eries combined. The number of cans health. Not a timid fear of doing against 3,551,050 last year.—Ex. this and that, because it may injure you, but the following up of straightforward laws of health. Breathe nothing.

We may here clash with many a preconceived opinion in starting our we the highest temperature for every sures are no longer advocated, and the scene. It is expected they wi eliminating and tonic medicines, de- overtake them near Chia Pass. approved of.

To us it appears that fresh air is the first necessity; we should allow has taken almost the whole estate of a diphtherial patient to be near an Kinfail, Glenmuick, Scotland. These open window. Next, we should use grounds are all now under sheep, and hot malt vinegar for flannel wraps as Mr. Winans is to convert them into round the throat, gargles of the same a deer forest, several thousand sheep diluted with water, and the most Winau's shooting grounds now extend tonic diet possible. Neither quinine from the east to the west coast of Scotnor mineral tonics, but hot, strong land, from the Beauly Firth to the wines, yolks of egg beaten up in Atlantic, and, in a straight line the strong beef tea; warm baths made of camomile flowers; feet placed in plans prepared for an extensive shoot-ing ledge, which, it is said will be one of the largest and most handsome wraps soaked in hot vinegar round the stomach.

The juice pressed from raw beef, heated in a farina boiler and given ings of the same within the mouth. Ing trains. commended.

Diphtheria is a preventable disease, and when we know more of the conditions under which the health of human life can exist, and are inclined to listed to it and act accord ing to it, we shall have fewer epidemics such as those of dipht heria.

## Planning in Farming.

A good farmer will look ahead of his work, but, he must plan intelli-lief of the sufferers by the Vienna

spirits and mental distress aid diph and shiftless. Intelligent industry theria-in fact, it is in every respect, rarely fails to bring a reasonable de a negative disease, and consequently, gree of success. The difficulty with like all negative poisous, rapid in many farmers is, that they do not ction.

The term" diphtheria" was applied and are rather crowded along by it. to this throat disease by Bretonneau always a little behind. Their fault in 1821; from this term diphtheria is not so much the undertaking of too has originated, relating to the forma- much, as the failure to so lay out tion of a false membrane in the their work that one operation shall throat, analogous to that which not necessarily crowd upon another. characterizes the throat in croup. One must be able to look shead, and Recent researches have, however, in a measure realize what may be exestablished the difference between pected in the future. If one prothe two, showing that diphtheria is more of a constitutional disease.

The throat becomes affected as the a good deal of time will be required poison, which no doubt originates in tending it, especially during the in the blood, is breathed out, and so season when weeds are plenty, also quick is the action of this poison that at harvest time. Now if he puts in death often occurs within forty-eight several acres of roots which will rehours. If the larynx of the throat is attacked the danger is very much will need all his attention, one crop greater, as the patient is suffocated; or the other must suffer, and possiin other cases exhaustion or paralysis bly prove a failure. If a farmer Tho has about all he can do in secur-This disease mostly appears as an ing his bountiful hay crop at the proepidemic, showing that the breath of the patient carries the poison further. branch out a little and raise an acre and also that local causes develop it.

It has been proved that low, damp because he has read of large returns and swampy neighborhoods develop from strawberries, and plants land diphtheria as an epidemic ia its most without planning for plenty of extra malignant form, and this was most help in picking time, he will be strongly shown by the epidemic in Ludington, Michigan, which occurred his strawberries, for both will require

## Deferred Matter.

R. R. Accident.

A despatch of the 2nd instant, gives the following particulars of the accident on the Boston & Maine R. R.:

"The regular Portland train leaving Boston, on the Boston & Maine railroad"

"The regular Portland train leaving Boston, on the Boston & Maine railroad"

"The regular Portland train leaving Boston, on the Boston & Maine railroad"

"HE Subscriber has opened a FIRST CLAS TAILORING ESTABLISHMENT in the Shop formerly occupied by Mr. P. H. Ans lead, near Letson's Scales, Water Street Chatham. nately few houses are built with a Boston, on the Boston & Maine railroad thorough draft, and the air becomes stagnant within their walls; it is exhausted of oxygen, and divitalized, ready to transmit anything of a The train consisted of one baggage ready to transmit anything of a vitiating character. As soon as an evil or low smell is felt in a house, it should be seen to; not only on its own account, but because it will certainly develop into something worse. One unknown man was killed, one or two seriously injured, and some 60 others more or less bruised.

The train consisted of one baggage car, one parlor car, two passenger cars, and two engines, all of which went through the bridge except the engines. One unknown man was killed, one or two seriously injured, and some 60 others more or less bruised.

ENGLISH & CANADIAN CLOTHS if occasion offers, and malignant air The cars caught fire, and were comparticles are associated with it. It is not only that we suffer from an impure state of the atmosphere, but we are living in a medium of danger that will foster any disease brought cluding the cost of the bringe, at Cloth Purchased elsewhere will be o it. \$30,000. An inquest willbe held on the body of the man killed.

Immigration Statistics.

During the year just passed the total number of immigrants which arrived at Ottawa agency was 1,342, consistpeculiar indulgence of living in closed rooms and on small diet.

The latest researches in America and personal control of the wood, before the Academy of Natural Sciences, Philadelphia, who start Sciences, Philadelphia, who shad worked in connexion with Dr. Henry F. Formad, to trace the diphtherial poison to its true origin.

Boston is to have a statue of Garto bring from it the poison as it was field, to cost not less than \$10,000.

PRINCE EDWARD ISLAND .- Accord. ing to the Charlottetown Patriot the Island mackerel catch has this year been only half as large as it was last was seen under the microscope, fre- extending, the number of cans reportyear. The Norwegian gill nets for cod, recommended by Professor Baird, was pointed out that inoculation fishing was not so vigorously promight do for diphtheria what it is supposed to do for smallpox.
