**UNREST SPREADING
AMONG NATURE**

"European unrest" is spreading to nature itself, and Europe is now puzzled with strange manifestations of upheaval and decay.

France's Government scientists are studying the recent phenomenon of a plateau rising in the Bay of Biscay, discovered when mariners taking soundings found they were almost aground at a spot where normally they should have had deep water. This is only one of a series of mysterious occurrences in nature noted throughout Europe recently.

For instance, one side of that tremendous pile of rock, the Matte horn in Switzerland, has commenced to "move." Inhabitants of half a dozen villages have been ordered from their houses to escape the danger of falling rocks and a guard of troops has been scattered through the district to warn off mountain climbers.

Near Greece, on the Island of Santorini, a supposedly extinct volcano has suddenly broken forth into violent eruption throwing smoke, lava and burning stones to a great height and causing panic among the population. Many of the inhabitants have fled from the vine-clad island, fear-

TEA

No other brand is quite so pure, fresh or delicious. Try it.

ing that more violent eruptions and a disaster would overtake them if they remained.

Twenty-five acres of the Isle of Wight have just fallen into the sea. Three villages on the shore of the Isle will shortly have to be moved further inland, while geologists report that the ocean is making inroads against the shore-line of the entire island at the rate of more than a yard a year.

The stately and copings of the Houses of Parliament have suddenly succumbed to a mysterious attack of destructive gases in the air and are crumbling and falling at an alarming rate. Under the same sort of attack, the dome of St. Paul's Cathedral has developed dangerous

**Are We Interested
In Schools?**

There is a growing interest in the broad problem of education; but a fair survey of the situation as respects the common people very plainly suggests that this interest is not general. It does not exist in sufficient degree at the vital centre—the home. For example, how many parents having children at school have ever taken the trouble to come into contact with the teachers whose relationship with those children is so important? There is room for the fear that the answer would be disappointing, remarks the Ottawa Journal. Probably nine parents out of ten have never seen the inside of the school in which their children are being educated.

If genuine progress in respect of education is to be made there should be less public detachment from every thing relating to schools. This is particularly true of large communities. It is perhaps one of the drawbacks of city life that parents take most things for granted as relates to the school system and all that happens within that system. The children are sent to school and that is pretty much the end of the matter in the average home. Only the few take a direct personal interest in what goes on within the scope of the plans of the Board of Education.

If we are to base an opinion on what appears in the public press, it would seem that in some of the larger cities of the United States there has been an awakening in the matter of parental interest in the common school. In New York, for example, there is a United Parents' Association, which has demonstrated its interest in the question of education by sending out suggestions. Some of these suggestions may seem commonplace, and yet it is the sum total of ordinary things which made up the solution of what is regarded by the association.

(2) The Banff-Windermere Road from Sinclair Canyon.
(3) Bungalow Camp at Vermilion Crossing.
(4) Mountain goats sampling salt provided by Parks Department, to entice them down to the border of the Road.

This is the Banff-Windermere Highway. It really needs no introduction for it is numbered among the most famous and most perfect Motor highways in the world. Above are the latest pictures of some of the country it passes through and some of the mountain goats one is sure to encounter just outside Banff.

Here is what the "Motor News" says about it: "This wonderful highway, wide and smooth and hard and level as any the old Romans or the modern Americans ever built, is in the Canadian Rockies. For 114 miles it twines its tortuous way through unbelievably magnificent mountain scenery, from Banff, the world-famous resort in Alberta, to Lake Windermere, in British

Columbia, clinging to the brim of sheer precipices, cleaving through sheer canyons, skirting giant mountains, spanning giant rivers, overlooking giant valleys and affording the most soul-shaking views of rivers and valleys and mountains stretching away and away, ever so far, ever so deep, ever so high, for ever and ever, amen."

The mountains goats and sheep, incidentally, are quite tame and little groups of the mild-mannered creatures not infrequently make themselves at home in the middle of the roadway and gaze wonderingly at the Lord of Creation who wait impatiently in their cars for permission to pass.

**UNTOUCHABLE
URE**

With the many reports of expeditions formed for the salvaging of the treasures of the sea one would hardly believe there is a spot noted for its wealth but intangible as far as treasure hunting is concerned. If all accounts are true, or but a fraction of them there could not be found a more wealthy spot than the Goodwin Sands.

Situated in the Straits of Dover and ten miles long, off the shores of Kent, England. These sands have ever proved a menace to storm-driven vessels. Modern liners have been their victims as well as freighters and tramps. The cargoes and hulls carried by these ships and lost in these sands have so far remained unsalvaged.

It was in the vicinity of these sands that the Dutch beat the British in a naval encounter in the year 1652, and many of the British boats were said to have been submerged in the Goodwins. Unlike many of the tales about the Sargasso Sea, the Goodwin sands are in reality the graveyards of missing ships, and are feared and avoided by all navigators.

Perhaps one of the most curious although not uncommon sights is to go out to these sands in one of the eight-seeing boats which make regular trips with visitors. Here one is amazed by the amount of wreckage partly projecting from the sands and it is with a feeling of insecurity that one ventures near them, although at certain periods when the tide is out they are quite safe for pedestrians.

Many expeditions have made attempts at salvaging some of these wrecks without avail; even equipped with the most modern apparatus the

The Minister Says:

"We had a Fawcett Pipeless Furnace installed by Oza Kaye in the Home of Murray Harbour North and also in the Church and both gave perfect satisfaction."—Rev. J. S. MacKay.

The new Fawcett Furnace, pipe and Pipeless offers advantages where quick heat counts that no church, school, or public building can ignore its radiator for example, instead of being steel (excellent radiation, but poor durability) or cast iron (durable, but inferior from the radiating standpoint) alone among Canadian furnaces its radiator is of Toncan Metal—pure iron, for durability, fused with copper for finest radiation.

The Priest Says:

"After having given it a trial during the hardest part of the Winter, I am pleased to say that the furnace is giving entire satisfaction. We have saved fuel, in comparison with other years: besides the heating is easier and more prompt than that of the hot water furnace."—A. Bourassa, P're Cure, St. Alexandre, P. Q.

The 1925 Fawcett is even better Castings have been deepened, to insure freest circulation. The feed neck has been taken farther from the radiator, lengthening the life of both. By the way this latter change was made as the result of 15 year tests—showing what an asset to the furnace buyer there is in the 70 year experience of Charles Fawcett Ltd.

The Merchant Says:

"We thought if we got sufficient heat from it to heat our store we would be well pleased with it, but to our surprise we found that we were getting too much heat for store requirement and found it necessary to find some escape for approximately 40 p. c. of our supply. This we did by making an opening in our store ceiling and inserting a grate on the second story flat, which is occupied as a dwelling, and the escaping heat from the store makes quite comfortable the second story living and bedrooms."—J. A. Leslie, Port Morsien, C. B.

The Fawcett is not an assembled but a finished product, made throughout in our own plant which is so complete that other furnace manufacturers have work done here.

The Doctor Says:

"I must congratulate you on the heating system you have sold me. . . . The heat is sufficiently moist and hygienic. It is a blessing in the house, which is always comfortable for the women folk. If I had had this system ten years ago, I would have had less trouble and I strongly recommend working on its installation in all homes."—Doctor J. L. Landry, Kamouraska Co., P. Q.

Hot air heating of the Fawcett type is the most healthful in the world. By merely keeping the vapor tanks (conveniently placed under the fire door) filled daily, the air in your home is changed twice an hour, replaced by moist, fresh, sterilized air.

What Happened?

Do you remember the first meal you wife cooked for you when you returned from your honeymoon? And the range she used? Did your Fawcett Furnace ever stand you in good stead during nights of sickness? If you haven't a Fawcett Furnace or range, what's the most interesting thing that ever happened to you through its lack? What's the oldest stove, still in use, that you know about? What's the least fuel you ever used a season while keeping warm? By sending in 200 word answer to one of these or any related question you have a chance to win a

Free Baby Grand!

The little range shown above, complete in every detail—a miniature that is more than 4 times its will actually cook and roast, will be given to the best letter received not later than October 31.
