Hundreds of Repeat Orders

Shows Conclusively That

"GASTINE"

Has Made Good.

Hundreds of repeat orders and scores of unsolicited letters from Motorists and Motor Boat Owners who are using GASTINE with splendid results shows positively that these little wonder tablets are doing great work in reducing Gasoline bills. The cost is so low—only

\$1.25 Per Box of 100 Tablets.

and the results so big that if you are desirous of reducing your auto expenses you will give GASTINE a try—out—it will give you

30% More Mileage From Your Gasoline and No Carbon!

GASTINE is a powerful harmless chemical in tablet form. Mixed with the gasoline or kerosene in your tank, it becomes a tremendous factor for economy and efficiency, and puts more pep in your motor.

GASTINE makes starting easier, enables you to throttle down much slower "on high" and gives you an instant "pickup" with plenty of power for the hills. On sale at all the best hardware stores and accessory dealers.

CANADA'S REVENUE

Large Income Needed to Meet Our Mighty Expenditures.

Canada's revenue from all sources during the month of January reached a total of \$34,266,188, and was more than sufficient to meet the ordinary expenditures of the country, including those on interest and pensions during the month. The January statement issued by the Finance Department, moreover, indicates that revenue during the ten months of the fiscal year which have been elapsed were well up to expectations. During the period receipts from all sources aggregated \$288,250,911, as compared with ordinary expenditures of \$271,252,190; there was thus a surplus of revenue over ordinary or consolidated fund expenditure in the period of \$16,998,721. Should the average of receipts be maintained during February and March the revenue for this fiscal year will attain a total of approximately \$345,000,000.

Details of the revenue for January are as follows:

Customs, \$16,135,204; excise, \$3,051,847; post office, \$1,700,000; public works, including railways and canals, \$3,643,883; miscellaneous, including excess profits and income taxes, \$65,575,983.

Capital expenditures during the ten months aggregated \$234,559,182, made up of \$238,815,088 expended on war account, and \$5,662,428 on public works. In January war expenditures reached \$59,105,904, and public works expenditures \$3,073,829. Capital expenditures for January thus reached \$62,179,734, and about equalled the increase in the public debt for the month of \$62,015,109. The expenditure on war account during the month was heavy by reason of closing up and adjustment of overseas accounts. The funded debt at the end of the month stood at \$2,447,542,908; the gross debt at \$3,323,087,801; net debt, \$1,900,146,168.

The Standing of the Parties.

Strange things happen in politics. The farmers and laborers of Ontario have climbed to power by means of an election system which they are opposed to, and yet if the system which they advocate—a proportional representation—had been in force, they would probably be numbered with his majesty's loyal opposition at the present time, or at the best be a minor group in a provincial government. A summary of the Ontario election results as follows, the first column representing candidates elected and the second votes polled:

Liberals	29	336,715
Conservatives	25	336,715
Farmers	45	258,874
Laborites	12	127,086
Independents	1	45,056
Totals	111	1,153,567

From the above it will be seen that the voters numbered 1,153,567, and that the winning party, the Farmers, received 45 per cent of the vote. If the proportional representation method of elections had been in force the result of the election would have been approximately as follows: the first column representing candidates elected and the second votes polled:

Liberals	32	336,715
Conservatives	25	336,715
Farmers	25	258,874
Laborites	13	127,086
Independents	4	45,056
Totals	111	1,153,567

In other words the respective groups would vary in size according to the strength of the voting power which supported them. The Ontario elections show clearly the necessity for a change in our election machinery if representative government is to be an actual fact. A system which permits a political group with 386,786 supporters to secure only 25 seats as compared with 45 seats obtained by another group which only mustered 258,874 supporters, is not keeping with modern sentiment. Advancing the illustration one step more would see that Ontario is being governed by a cabinet whose supporters represent approximately one-third of the electors. This is minority rule with a vengeance—Canadian Finance.

Canada's Helium Gas.

Helium gas rising out of the ground in Alberta and other parts of Western Canada, and now used, in some localities of that country, to do the family cooking, may one time be carrying Britain's lighter-than-air flying machines in all parts of the world. It has been stated that there is enough of this gas which makes a satisfactory substitute for the highly inflammable hydrogen commonly used for airships, to supply the entire British Empire for many years. The wells in Western Canada are the only sources of the gas in the Empire. Its weight-supporting ability is 90 per cent, that of hydrogen. Aviation is occupying a good deal of attention in Canada, and this natural supply of the custom officials was a discovery that considerable liquor was being smuggled into the United States in automobile radiators.

Searching Autos.

Canadian automobilists crossing to the United States at Detroit are complaining that federal authorities have been "unreasonable" in searching their machines. It has been announced that the reason for the action of the custom officials was a discovery that considerable liquor was being smuggled into the United States in automobile radiators.

Paying Toll for Neglect

Needless exposure to damp and cold frequently result in a derangement of the Kidneys and Bladder.

When these important organs fail to do their duty, various evils arise, such as rheumatism, swollen hands and ankles, stiff joints, lumbago, sciatic neuralgia, stone in the bladder or gravel, excruciating pains in the back and sides, constant headache, dizziness, spots floating before the eyes, uneasiness of mind without reason, and general debility.

These are signs of serious kidney and bladder trouble, which require immediate attention. The most dependable remedy is found in GIN PILLS. They often prevent the operations which constant neglect may render necessary. They quickly and safely relieve congested kidneys, passing stone and gravel, healing and soothing inflamed organs and restoring them to normal. Thousands of letters from people who have been relieved are continually coming to us. Their writers often beg us to spread the good news to other sufferers that GIN PILLS certainly and surely will bring the help they need. Send for free sample, or go direct to your druggist or dealer, 50c a box. Money refunded if relief not given.

The National Drug & Chemical Co. of Canada, Limited, Toronto, United States Address, No. 200-202, East Main St., Buffalo, N.Y.

THE PRIMARY CAUSE

of most sickness is neglect of the liver. Constipation follows. The poisonous matter which should pass out of the body spreads through the system. That is the cause of sick headaches, sour stomach and biliousness and these troubles are sure indications that the liver needs attention.

THE CURE FOR ALL LIVER ILLS IS Hawker's Little Liver Pills

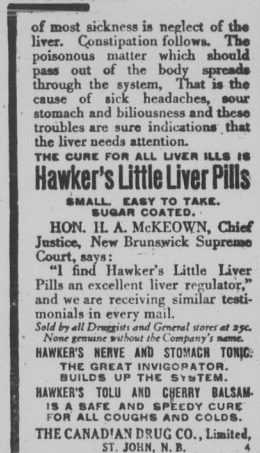

SMALL, EASY TO TAKE, SUGAR COATED.

HON. H. A. McKEOWN, Chief Justice, New Brunswick Supreme Court, says: "I find Hawker's Little Liver Pills an excellent liver regulator, and we are receiving similar testimonials in every mail."

HAWKERS' LITTLE LIVER PILLS are sold by all Druggists and General Stores as agents. Beware of cheap imitations. The name is prominent on the wrapper.

HAWKERS' REMEDY AND STOMACH TONIC: BUILDS UP THE SYSTEM. HAWKERS' TONIC AND CURET BALSAM: A SAFE AND SURE CURE FOR ALL COUGHS AND COLDS.

Semi-ready Tailoring

both good and true

"Haliburton"
A "Semi-ready" model

A SUIT that you select to live with must be of a style that will "grow upon you"—that you will like the better the longer you wear it.

A Semi-ready Suit will live a long time, and for that reason the fabric and fashion must be selected with care. The lines of true art—with every curve and cut just right.

The five essentials of service are worked into every garment—the perfect fit, the durable cloth, the good tailoring, the pleasing style—and the standard of value which the price in the pocket assures.

LIGHTING THE OCEAN.

How Certain Marine Creatures Illuminate the Water.

On still nights in tropical waters the sea oftentimes is illuminated as if by fires of its own. Every breaking wave-crest looks like a flame. An ear disturbing the surface seems to dip into molten metal. Swimming fishes leave wakes of brilliant brightness.

The phenomenon is due to the presence in the water of innumerable multitudes of minute animals, each of which holds up its tiny torch, so to speak, to contribute to the illumination.

Marine creatures of many tribes—crustaceans, jelly fishes, cephalopods, fishes of various species, etc.—carry lights. Some fishes have luminous disks on their heads; other have luminous spots along their sides, and yet others are covered with a luminous slime.

The "angler" fish has a regular torch for a back fin, enabling it to see while looking out for victims which its light is expected to attract. Another fishy species, found only at great depths, carries on the end of its nose what looks like an electric light bulb, and which serves an equivalent purpose.

It is in the depths of the ocean that the most remarkable light-bearing fishes dwell. There is a realm of inky darkness, into which no ray of daylight penetrates. If they are to have light, they must furnish it themselves; and, to catch every possible glimmer, most of them are provided with huge eyes.

Most remarkable in this respect of all known deep sea fishes is the "argyropelagicus," which carries a couple of dozen lanterns of large size—one on each side, in front of the eye, and the others along the belly in a double row. These lanterns are like a bull's-eye lamp, each of them with a double-convex lens of crystal-clear substance and a reflector behind.

The light is emitted by a mass of cells in the rear part, while the purpose of the lanterns is to direct a powerful sheet of white fibrous tissue. Each lantern has a muscular arrangement for turning it in any direction, and is connected by a nerve (entering at the back) with the central nervous system, so that the mechanism is manifestly controlled. Thus in all likelihood the fish is able to turn its lights on or out at will.

Another species has on each side of its head a double lamp, with reflectors, the two pointing different ways. That is to say, one of each pair of lanterns points upward and ahead, while the other is directed downward. While throwing a beam forward and in the direction in which it is going, the fish is able to illuminate the bottom over which it passes in search of food.

It is interesting to observe that the bull's-eye lanterns here described are constructed on the same principle as the lanterns of the most modern of human manufacture. Nature thought out the problem and produced the invention long ages ago.

The light of the marine torch-bearers and lantern-carriers (silverfish, goldenfish, or sometimes greenfish) is cold light—illumination without heat. It represents the solution of a problem which science has tried vainly to puzzle out. In other words it is light without waste, the energy employed in making it being wholly expended in illumination.

It used to be thought that this light was due to the presence of phosphorus—whence the term "phosphorescence." Long ago, however, the notion was exploded. The best theory at present is that it is attributable to some sort of chemical change effected by the animal, which, when oxygen comes into contact with it, gives out light. In the case of the argyropelagicus we have recognizable "photogenic cells" like those of the firefly's flashlight apparatus.

The Rainbow's Sound.

Incredible as it may seem, a beam of light can be made to produce sound. A ray of sunshine is thrown through a lens on to a glass vessel containing lampblack, colored silk or worsted, or any like substance. A disk having slits or openings cut in it is made to revolve swiftly in the beam of light, so as to "cut it up," thus causing alternate flashes of light and shadow. When one places his ear to the glass vessel he hears strange sounds so long as the flashing beam falls upon the vessel.

A still more extraordinary effect is produced when the beam of sunlight is made to pass through a prism so as to produce what is called the solar spectrum. The disk is turned and the colored light of the rainbow is made to break through it. Now if the ear be placed to the vessel containing the silk or other material, as the colored lights of the spectrum fall upon it, sounds will be given out by the different parts of the spectrum, and there will be silence in other parts.

For instance, if the vessel contains red worsted and the green light flashes upon it loud sounds will be given forth. Only feeble sounds will be heard when the red and the blue parts of the rainbow fall upon the vessel. Other colors will produce no sounds at all. Green silk gives out sound best in a red light. Every kind of material gives more or less sound in different colors and no sound at all in others.

Counting a Billion.

According to Popular Science Monthly it would be hard work to count a fortune of a billion dollars. Counting out one-dollar bills at the rate of 150 a minute for eight hours a day, it would take a billionaire forty-six years of 360 days to finish the job.

The Teletograph.

The teletograph, an instrument which can give "electrically, at any distance, an exact fac simile of writing or drawing done at the transmitting station," is doing away with messenger service in many large commercial and industrial plants.

The responsibility for a daughter rests with the mother. The right information which is imparted at the proper time has a life but insured the success of her life. When a girl's thought becomes aches, dizziness, or a disposition back or lower limbs and a dead mother should come to be a dead mother. Lydia E. Pinkham's Vegetable Compound for the coming change in period in a young girl's life with her health. Thousands of women rest to the wonderful virtues of this what it has done for their daughter.

Brooklyn, N.Y.—"I cannot praise Lydia E. Pinkham's Compound enough for my daughter. She was 15, sickly and pale and she had to stay in bed most of the time. She suffered from dizziness and was without appetite. She was under the doctor's care as always complaining about her back as I did not know what to do. I read in your wonderful medicine so I made up my mind to try it. I had taken five bottles of Lydia E. Pinkham's Compound and I feel so well now. She has had no more back aches. She is happy and feels as much better. I feel Lydia E. Pinkham's Vegetable Compound to be the best medicine I have ever used."—Mrs. M. F. Farnham, 318 Brooklyn, N.Y.
