

Edward Martin, M. D. ; The Treatment of Tuberculosis, by Lawrence F. Flick, M. D. (*new*) ; Scrofulosis, by Walter Chrystie, M. D. ; Scurvy, or Scorbutus, by Charles Edward Banks, M. D. (*new*).

The second volume of this great work shows on every page its practical character and the endeavour of its editor and author to furnish exactly that aid for which every physician, and especially the general practitioner, seeks in times of doubt and anxiety.

Comparatively few physicians have the opportunity to benefit by a long experience in a large hospital, nor can all practice in great cities where diseases of every sort are met with in varying types and phases. The value of this work then, to the general practitioner, cannot be overestimated, giving as it does in careful detail the most recent accepted methods of treatment in the chief medical centers.

Therapeutics is a Post-Graduate course which every physician may take in his own office with acknowledged authorities as his instructors and the experience of the world for his study.

The second volume contains able practical sections on the following subjects :
