

Comprehensive Efficiency

... In ...

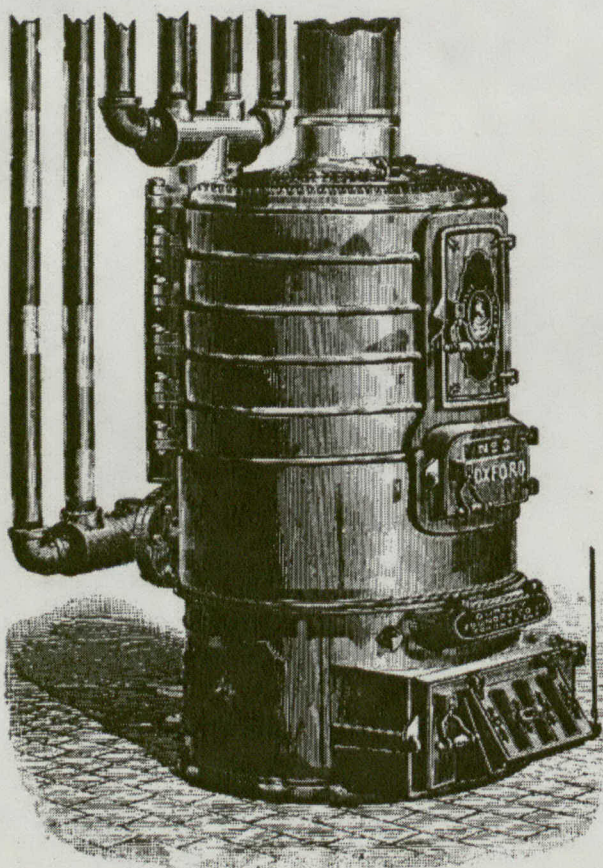

Gurney Heaters

The evolution of our Boilers for hot water and steam heating has been comprehensive—symmetrical—resulting in the complete efficiency of every detail.

We have approached the problem from every side. From that of economy, that of efficiency, that of durability, and that of simplicity. We have not tried to overcome one fault to the exemption of others. The result being that our Heaters are equal to all demands, lacking nowhere, everywhere successful.
