

## Satisfaction in Specifying the "Sovereign" Hot Water Boilers and Radiators

The Architect who specifies "Sovereign" Hot Water Boilers and Radiators is recommending to his patrons a Firm that has long been associated with the making of the most efficient and improved heating apparatus in Canada.

The principals of the Taylor-Forbes Company introduced into Canada the present design of Radiator and the "Sovereign" Radiator, as made to-day, is an improvement on the original improved design—having large interior space with free channels and screw nipple connections. Every assembled Radiator is subjected to a test of tremendous hydraulic pressure before it leaves the factory.

It was the Taylor-Forbes Company that introduced with the "Sovereign" Hot Water Boiler the *larger first section* which is now universally admitted to have very materially increased the heating capacity of the upright or round design of hot water boiler.

Any Architect making inquiries from his patrons who have installed the Taylor-Forbes equipment will find that their satisfaction is complete. We take a very hearty interest in every "Sovereign" installed and are more interested than either the customer or the Architect in seeing that perfect satisfaction is the lot of the householder who has installed "Sovereign" Boiler and Radiators.
