

ROLLS ROYCE

Rolls Royce is involved in aerospace and industrial power. Products include aero-engines, oil drilling equipment, naval turbines, cranes and mining equipment.

On the industrial power side, Rolls Royce provides a comprehensive range of generation, transmission and distribution equipment and can supply a complete "turnkey" power station.

Rolls Royce is seeking to improve efficiency and cut emissions and noise. It is company policy to lead the world in environmentally acceptable engines and to maintain the highest standards.

Rolls Royce is working on studies of new supersonic transport aircraft and a variety of new propulsion technologies.
