

- No. 61: New lines in the spectrum of hydrogen, by D. S. AINSIE and I. S. AINSIE
- No. 62: The absorption of helium by hydrogen, by M. L. McLENNAN
- No. 63: On the absorption spectrum of hydrogen, and of arsenic, by YOUNG and H. J. C. IRVING
- No. 64: On the optical transparency of hydrogen, by J. E. I. YOUNG
- No. 65: The use of the Jamin interferometer for the measurement of small amounts of helium, by M. L. McLENNAN and R. L. I. YOUNG
- No. 66: The estimation of the composition of gases by the use of a Jamin interferometer, by R. L. I. YOUNG
- No. 67: The permeability of hydrogen through rubber, by R. L. I. YOUNG
- No. 68: A continuous flow apparatus for the measurement of the permeability of pure helium mixtures, by R. L. I. YOUNG
- No. 69: The production of helium in Canada, by J. C. McLENNAN
- No. 70: Composition of the vapor phase in the methane-nitrogen system, by E. EDWARDS
- No. 71: On the extreme ultra-violet spectrum of selenium, by J. C. McLENNAN and H. J. C. IRVING
- No. 72: Absorption of light by hydrogen, by P. R. PRAIRIE
- No. 73: The adsorption of gases by hydrogen, by S. J. McLENNAN
- No. 74: The density of adsorbed hydrogen, by S. J. McLENNAN
- No. 75: On the permeability of hydrogen and helium through rubber, by S. J. McLENNAN
