Build us a plain car, one that will make the most miles with the least possible expense; the lighter the less tire expense, which is our greatest

appeal to them most is one that weighs about 1200 pounds with 31/2 in.

weighs about 1240 Politics with the stress on 30 in. wheels. A car of this kind is rated to carry 600 pounds weight on each wheel. Considering the light body of the car it will be easily seen that four or five people can be carried without over-loading the times.

The farm automobile is proving of

farmers. They use their autos to haul milk or cream to the creamery, produce to the town and return load-

ed with all sorts of articles required

Horses No Longer Afrald.

The power plant in some cases is used as an auxiliary in the cutting of

odder. One interesting thing to note

is that the increase in the number of

automobiles in the farm roads has had the effect of making the horses

accustomed to motor vehicles and they are no longer afraid. Several years

ago this was the cause of very great concern to drivers operating motor cars on the country roads. Let the

automobile factories give special at-

tention to the farmers' car. It is one

of the great markets that remains

## A Much Superior Instrument

Just as unparalleled success has come to the old and original firm of Heintzman & Co.. Limited, in the manufacture of distinctively high-class Grand and Upright Pianos, so it is

# Heintzman & Co. Player=Piano

This word "Success" cannot be applied to the instruments of this house in any ordinary or commonplace acceptance of the word.

The name is one that carries with it unquestioned assurance of piano value, measured in any way one will-musical quality, genuine worth, or architectural and artistic beauty.

Think of our new Player-Piano with like andards set and adopted in its manufacture, and clearly you have something different to what has been in your mind when considering a Player-Piano

A Player-Piano is a combination of player and piano. In the Heintzman & Co. Player-Piano you have (a combination of the best in both player and piano-a Heintzman & Co. Player in a Heintzman & Co. Piano. What could be more perfect ?

Arrangements may be made to take your old instrument in exchange when purchasing a Heintzman & Co. Player-Piano.

# BOY ROUTS BUNGLAR

Christmas Watch Saves Him From Knife Thrust-Robber Flees Before Defender.

WAKEFIELD, R. I., Feb. 18 .- Earl Rollinson's star gifts last Christmas were a jackknife and a small silver. At the head of the stairs he met a watch. Earl is just 15. By day the man. Earl shrieked, but he kept as watch and knife were invariably car- nerve.

#### How Fat Women Can Reduce Their Waists.

Fat shows a preference for the abdomen, chin, ankles, hips, etc.—the quiet spo(s—just the places where it can show that is to be done—exermost, or worst. What is to be done—exermost. cise and diet—are they the only alterna-tive? On the contrary, they seldom do

Awakes, Hero of the Hour.

use the Marmola Prescription Tablets. One of these after meals and at bedtime will produce the requisite reduction without bother, delay or harm. In a few weeks you can be losing a pound of fat a day. It will drop off, as it were: disappear as quietly as it came; remove uniformly without causing even a suspicion of a wrinkle or distress. Meanwhile, eat and act as usual; deny yourself, nothing. It is not required, if Marmola Tablets are used.

Get off two inches of waist line before the month's end. It can be done-certionly, cheaply, safely. The Marmola Tablet is nonlinjurious (it being made after the famous fashionable formula—½ oz. Marmola, ¾ oz. Fl. Ex.—Caseara Aromatic, ¼, oz. Peppermint Water), and it costs, only seventy-five cents, the large case, of any druggist, or direct from Marmola Co., 837 Farmer B.Gz., Detroit, Mich. Wm. Ramsay.

sharing with Earl all the honors due a

It was midnight. A strange noise reached Earl's sensitive ears. It was not the cat, for she was in the cellar. The family were asleep. It might be burglar. Earl alone heard. From beneath the

oillow he drew his precious watch and placed it in the pocket of his pyjama coat. Then he secured his jackknife. In an instant it was opened and clenched firmly in his right hand. another instant he had crept stealthily toward the direction of the strange

It fell with beneath the pillow. force on the lad's chest. But it struck To-day the knife and watch are the watch and failed to penetrate the force on the lad's chest. But it struck skin. The watch case was dented, the srystal smashed.

Earl was now on his metal.. With a fierce lunge he aimed his trusty knife at the burglar's breast. The intruder dodged, but not in time. The boy's blade gashed the burglar's hand and

A better plan for ruducing the fat is to awakened, investigated, found that no awakened investigated, found that no booty had been secured, and, after replacing his blood-stained knife and placing his blood-stained knife and Earl assured his parents that he was

#### Farmers Will Be Buyers When Autos Are Built To Suit Requirements

A Market of Great Possibilities That Remains Almost Untouched-Class of Car That Appeals-Must Be Light and

The prosperous farmers of Canada, in eastern and western Ontario and the Niagara districts, are watching very closely the development of the farm automobile by several of the leading motor industries of Canada. There are two or three firms, two at least we should say, that are now beginning to make a special study of the needs of the farmers and are ouilding cars suitable for this class

deas and the automobile built for the farm must appeal to him along the of his special requirements. What the farmer wants is a small car of good material; one that is light weight but strong enough to stand abundance of power in relation to

### Gasoline Not So Very Dangerous

plosions.

Gasoline, generally regarded as a cause of its explosive properties under ney E. Lacy to be comparatively safe, can be used. the proper means and appliances em-

very rapid combustion, causing great heat and consequent expansion of the says Mr. Lacy. gasoline contains neither, it is readily tank, in other words in a liquid form. In order that gasoline, or, in fact, any ward. liquid fuel, may be ignited, it must first be vaporized, then mixed with ever air comes into contact with gaso- him who line the process of vaporization is set trying to up and the gas resulting is, in general, combustible. It is not combustible, diator, nor does it remove the danger however, unless the proportions of of being impaled upon a lamp bracket, gasoline vapor and air are within certain limits. A combustible mixture is rendered incombustible by the addition of more air, thus diluting it, or, by many prefers to use the left hand. It adding more vapor, enriching it. This is also claimed that by using the left is readily understood when it is remembered how carefully the needle valve must be adjusted that ignition in the cylinder may result.

it vaporizes easily. The application of heat causes the liquid to gasify. At or below a certain temperature it re-The John R. Keim mill, which is located at Buffalo, and employs about feed at Buffalo, and at higher temperature it femalis liquid, and at highter temperature it femalis liquid, and at higher temperature of the vapor does not come into contact cranks a motor with his left hand, with the flame and in the presence of air no ignition or combustion will

> "If a can of gasoline be set on a ficient to relieve the pressure caused by the expansion due to heating, a match applied at this opening will simply cause the issuing gas to burn, just as the gas from a jet in your home. It is no more possible for the flame to enter the can than for the flame at the gas jet to run back into the pipe. This is just the condition prevailing in a gasoline tank in a car. The atmosphere above the gasoline in the tank would, in almost no instance, centain more than a very small per-centage of air. For this reason it would be next to impossible for the tank to explode. Explosion of the It is unsightly, uncomfortable, spoils the figure, tank could not take place other than causing wrinkles, flabbiness and loss of vigor. by flame entering and causing greater pressure than the vent could relieve or the tank would stand.

"We often bear stories about fire actually running back thru the gasoline pipe to the tank. This is ridi-culous in the face of the foregoing statements. Simply remember that, there being no air and gasoline vapor in mixture in the proper proportions, there can be no fire or explosion.

"Under the most favorable conditions It takes considerable heat to cause a mixture of gasoline vapor and air to ignite. The popular story about a gasoline fire being caused by the proximity of a lighted cigar is a myth. It takes more heat than that on the end of a cigar to cause ignition. To immerse the end of a lighted cigar into a dish of gasoline would have no other effect than if it were so much water The ignition of a mixture of gasoline vapor and air requires a flame or electric spark, or red hot iron, etc. The only danger, so far as the cigar is concerned, is due to the match which

"All this goes to show that gasoline is not the terribly dangerous substance that it is generally supposed to be when handled with reasonable precaution. The chief requirement for safety is that tanks and piping be provided of such character as to pre-clude the possibility of leakage. There is no danger whatever from any gasoline contained in tight tanks. The fact that gasoline vaper is heavier than air causes it to lie in the lowest places.

"In case a fire should break out do not waste time by throwing water upon it. Clasoline is lighter than water, and since the two liquids will not mix the gasoline will float, and throwis no danger whatever from any gaso-

to one of pure concentrated sulpi acid. It is of the utmost import that distilled water and the pure sulphuric acid be used, as impurite quickly affect not only the life of the battery plates but the proper working of the battery, particularly its abilit to hold a charge for any length of time Acids other than sulphuric will ruin to plates absolutely. At the beginning should be on a level with the tops the plates, and at the end of the cha it will have rises about it will have risen about one-quinch. Never use a match to examine the height of the fluid in regard to the tops of the plate, while the battery on charge, and care should be taken the vent of a battery while charging, for the gases generated may ignite and

AN IDEAL AUTOMOBILIST.

The farmer makes an idea automo bilist. If any little thing is wrong with his car he adjusts it himself just as he goes out and repairs his binder or mower when trouble besets the implements during harvest time. He is perfectly familiar with machinery, the greater part of the work on the farm to-day is done with modern machinery. Automobiles are already owned by hundreds of western farm ers and stock raisers and more buying this year than ever before.
