In the splendid cathedral church of Rouen is a suite of three or four rooms containing what is known as the "Tresor." This is a collection of valuable and interesting relica, forming quite a little museum, to which admission may be obtained for the modest fee of 25 centimes. To an Anglo-Saxon, quite the most interesting article in the collection is the plain leaden casket in which was buried the heart of the famous King Richard Coeur De Lion, who, it will be remembered, was slain by a bolt from the crossbow of Bertrand Chaluz. His body was buried at the feet of his father at Fontrevault, near Tours, but his heart was encased in two leaden caskets and buried in the cathedral of Rouen, "the faithful cley." the splendid cathedral church of Rous suite of three or four rooms containing

his heart was and buried in the cathedral of mouth, faithful cley."

The exact place of its burial seems to have been forgotten, but it was rediscovered in 1840, placed in a new receptacle and reburied in the choir. The old leaden cases, the outer one of which was in a most dilapidated condition, were placed in the "Tresor" with the "Tresor" and the place of the control of the condition of the condition.

The inner case is in comparatively good condition, the inscription being perfectly legible after all these hundreds of years. The Latin is somewhat peculiar, and it is curious to find that at a period when the art of working in metals was at an advanced stage the engraver of the inscription on the coffer which was to contain the heart of such a high and mighty potentate did not take the trouble to ascertain what space he required for the king's name, so that he had to carry over the terminal elter to the next line. It is noteworthy, too, that Richard is styled "Regis Anglorium," "King of the English"—" not of "England"—while no reference at all is made of Normandy or Aquitaine. The box is about a foot long, eight inches wide and five deep.—Philadelphia Ledger.

The Careless Baggage Smasher.

Lottery of a Big Auction Sale.

Lottery of a Big Auction Sale.

An auction sale of the unclaimed freight of a big railroad is an interesting sight. With the present improved methods of tracing lost articles and the splendid machinery adopted by the up-to-date transportation companies in shipping freight, one might at first blush wonder how so many articles go astray. But when one takes into consideration the great mineage of a trunk-line railway, the millions of pieces carried by it, of every conceivable variety and value, and the rush and bustle of the American people, it is rather astonishing that such a small percentage fails to reach its destination. The motley crowd that gathers at these sales is by no means the least interesting feature. The ublquitous bargain-hunter is there, inspired by no other motive than the gratification of his morbid desire to get something cheap. Then there is another class of people whose only object is to speculate upon the hidden contents of the packages, boxes, etc. On the whole, it is a good-natured lot, often yying with each other in the bidding, and in this way many things bring several times their real value. Recently the Baltimore & Ohio Railroad, one of the largest carriers of freight in the United States, sold the unclaimed articles in its custody at its most spacious warehouse, at Locust Point, Baltimore. Some idea of the extent of the sale may be formed from the fact that over eight quarts of paste were used in labeling the pieces to be sold. The articles disposed of were freight which had been kept for six months at various points along the road and which had not been called for the catent of the sale may be formed from the fact that over eight quarts of paste were used in labeling the pieces to be sold. Epson Salts as an Anaesthetic.

Magnesium sulphate, commonly known as opsom salits, is reported by Dr. Samuel J. Meltzer, of New York, to have proved an anaesthetic when injected into the spinal cord. Dr. Meltzer's statement was made before the academy of medicine Thursday even ing and discussion of it is expected at the meeting of the society of surgeons this week. It is also reported that among several surgeons who have tried the new anaesthetic one gave it in a case of tetanus in the hope of giving some rellet and that it actually produced a cure. Dr. Meltzer points out that the discovery is only in its experimental stage at present, but think that what has been proved should be known to the profession.

SUNLIGHT. STABLING THE IRON HORSE. SOAP

Anyone at all familiar with railroads has seen the engineer dismount from the cab, oil can in hand, as soon as the train cab, oil can in hand, as soon as the train has come to a stop at some way station; seen him walk slowly about the ponder-ous machine, feeling of each bearing with his free hand as he filled the cups with directions.

In THE FAMOUS OKANAGAN VALLEY—

old ten-acre fruit lot; partly improved and planted; under irrigation; fine stretch of lake front; the finest peach district in Canada. R. J. Hogg, Peachland, B. C.

nis free nand as ne filled the cups with a wrench or examine critically some ill-working air pump.

To any man all this is interesting, but how many are there is all the west. To any man all this is interesting, but how many are there in all the vast crowd that enter the city daily at the great terminals who can tell offhand what becomes of the train when once what becomes of the train when once the cars are emptied of the passengers? To be sure they have seen the cars on a siding out in the yard. They know, perhaps, that a roundhouse is a place where engines are kept when not in natural use. But beyond this the ideas of the ordinary man are a bit hazy.

As soon as the passengers have left a train that has just come in from a long dusty run it is backed off on a side track and men go upon them at once and be-

and men go upon them at once and begin to put them in readiness for the next trip. The windows are washed, cars freed from filth and dirt, seats are cleaned, water tanks cared for and the lighting apparatus put in order.

The locomotive, after leaving the cars, proceeds at once to the roundhouse, where the ponderous machines also re-ceives a proper overhauling. First of all the tanks are filled with water and the fuel supply is replenished. Then a few puffs bring the fire-box above the ashpit, where the fires are cleaned and dumped all together. The next thing is to stable the great iron horse.

The roundhouse itself is a most uninviting place, with its soot-begrimed walls and smoky interior. These buildings are all constructed on the same general lines, low, one-storey structures, generally are built of brick and semicircle in shape. The centre of the circle is the centre of the turntable. Arranged along the inner side of the building is a line of doors, each exactly like its neighbor. Under each runs a track of standard gauge,

When the fires of the locomotive mave been cared for the engineer runs his machine upon the table. With deft hand at the throttle he brings it to a stop at the precise point where the hundred tons of steef balance on the spindle that supports the bridge. Then the ponderous mass is slowly revolved until the required track is reached and the engine is backed into the roundhouse.

Once within the house the engineer's

Once within the house the engineer's duty is done. He has but to go to the office and report in a book prepared for the purpose any repairs that are needed, and he can go home assured that his ma-chine will be ready for him when he goes on the next run.

The engine is now turned over to the round-house crew, who go to work on it at once. The attention that a locomotive receives on arrival at the round house is about the same as one would expect to see bestowed upon a race orse. Wipers go over every inch of the

Throughout this work keen watch is kept for any signs of broken parts, and any found are repaired. The hundred or more flues are cleaned by steam pressure.

sure. An engine seldom comes to the house that does not need repairs of some sort. oming broken, and unceasing attention

one of the most interesting of all the repairs that are made in the round-house is the tightening of the tires on the big drive wheels. Each wheel is surrounded with a heavy steel tire. These constantly work loose, and it becomes necessary that they be tightened without sending the locomotive to the shops. To do this a stream of oil is fed auto-

matically upon the tire and allowed to burn as it runs down. The result is that the whole rim is soon a circle of flame That is kept up for a long time, and the tire, being heated faster than the wheel itself on account of the proximity of the

again become cold it contracts and then clutches the wheel hard and fast.

The cumbersome repairs, such as turning down worn drive wheels and replac-ing boilers, go to the shops, where the lathes, cranes and forges are to be had. But all the minor troubles are remedied at the "stables," and the foreman of the round-house is responsible for the condition of the engines. He is the man to

tions, and was cured permanently of the worst form of Nervous Prostration and Dyspepsia. He has recommended it to others with gratifying results. It's a great rerve builder.—12

Was in the Navy.

Governor Herrick, of Ohio, is respon-ible for this story of a negro camp-neeting in Southern Tennessee: "A negro exhorter had just made a great speech," he said, "and when he got through he went down among the congregation and asked each one to come and 'jine de army of the Lord.'
"One of the congregation, when this question was put to him, replied:
"T'se done jined.'

"'Whar'd you jine?' asked the ex-"'In de Baptist church,' was the an-

SUNLIGHT WAY OF WASHING

FIRST.—Dinebe article to be washed in a tub of inforwarm water, draw is out our analysis and the soap lightly over it. Be particular not to miss soaping all over. THEN the particular not to miss soaping all over. THEN roll it in a right roll, lay in the tub under the water, and go on the same way until all the pieces have the soap rubbed on, and are rolled up.

Then go away for thirty mustes to one the same way until all the pieces have the too and the the. Samilight? Soap do its work. NEXT.—Atter soaking the full time rub the clothes lightly out on a wash board, and the dirt will doop out; turn the garment inside out to get at the seams, but don't use any more beaugh of the same out; turn the garment inside out to get at the seams, but don't use any more beaugh of the same out; turn the garment inside out to get at the seams, but don't use any more beaugh of the same out; turn the garment inside out to get at the seams, but don't use any more beaugh out; turn the garment inside out to get at the seams, but don't use any more beaugh out; turn the garment inside out to get at the seams, but don't use any more beaugh out; too don't use any more beaugh out; too don't use any more to don't use any more beaugh out the same of the water gets too dirty, pour a little out and address the same out to don't use any the same out and hand to don't use any the same out and hand up to dry.

For Woolens and Flanesels proceed as tollows:—Shake the articles free from dust. Cut a tablet of SUNNIGHT SOAP into shavings, pour into a gallon of boiling water and whisk into a lather. When just lukewarm, work articles in the lather without twisting and hang in the open air.

The most delicate colors may be safely washed in the "Sun-light" way.

Wour Money Refunded by the dealer from whom you buy Sunlight Soap if you find any cause for complaint.

LEVER BROTHERS LIMITED, TORONTO

Newspaper Cessor on the Bench. (New York World.) The trial of the persons charged with having committed the "suit case" murder in Boston will begin Monday, and Judge Stevens has directed that the newspapers shall not "publish any news or make any comment upon this case." The object of this judicial censorship is to make sure that the case "be tried by an honestly impartial abd unprejudiced jury." It is an ancient but by no means venerable power under which Judge Stevens acts when he forbids the newspapers to print anything more about the case until the trial begins. It is a companion anachronism to the theory that the best qualifications for an impartial juror was hopeless ignorance combined with only a rudimentary intelligence.

And the other closing which swandowing inquids and opening to receive food only.

ISSUE NO. 1. 1906.

JOHN AN UNLUCKY ROYAL NAME. Many Monarch Bearing It Met With

Misfortme.

It is strange how good or bad fortune seems to attend certain names; and this is the more marked in the persons of royalty, on account of their conspicuous position, than in the case of the ordinary individual. Among sovereigns it is doubtful which must be considered the most unlucky name, but it is probable that John is the name of ill omen. For instance, John of England has alwaye been branded as an infamous monarch, a character which he hardly deserved; still, it was his luck. John of France was captured by the Black Prince, who, by the way, was not the hero we have been taught to consider him, but a very unserupulous ruffin, John Baliol of Scotland has been despised by his fellow countrymen because he pandered too much to the English.

Robert III. of Scotland changed his name from John, but the ill luck of the same name clung to him. During his lifetime he was worried to the verge of despair by his brother, the Duke of Albany. He was himself a cripple, his eldest son was starved to death in prison, and his youngest, when on a voyage to France, captured by the English. Robert III. died of a broken heart.

John I. of Bohemia, was blind; John I., Misfortune.

of a broken heart.

John I. of Bohemia, was blind; John I., John I. of Bohemia, was blind; John I., Pope, was imprisoned by Alaric, King of the Goths, and Pope John X. was driven from Rome by Guy, Duke of Tuscany, John XI., Pope, was supposed to have been poisoned by his brother, Alberic, who kept him a prisoner in the Lateran. John XIV. also died in prison from poison or starvation. John XV. ascended the papal throne after the murder of Boniface, and was forced to flee to Tuscany, where he died of fever. Nor was John XVI. more fortunate, for he was dubbed the "Anti-Pope," and after a varied career, which lasted only eleven months, he was brutally tortured and then consigned to a dungeon, whence he

then consigned to a dangeon, whence he never emerged alive.

John I. of Constantinople was poison-ed; John II. was killed while boar hunding; and John III. was dethroned, his eyes were put out and he was cast into prison, where he died. John I. of Castile, was killed by a fall from his horse. This is only a portion of the long list of unlucky Johns, but it will serve to show that there is good reason for claiming that monarchs should avoid the name, if they possibly can.—From Tit-Bits.

An Old Farmer's Philosophy.

At the end of one of the meetings of the International Sanitary Congress in Washington a young layman asked Surgeon General Wyman a question about the construction of the throat.

"If the throat was constructed like

that," said General Wyman, smiling,
"there would be more truth in the flipperty-flap story than there really is."
"The flipperty-flap story?" murmured
the young man, dazed.
"Yes. Did you never hear it? Listen,

"A quack medicine vendor stood in a carriage selling a cough cure. To graphain the construction of the throat he

"Ladies and gents, in your throat is two little flaps, one closing when swal-lowing food and opening to receive drink. and the other closing when swallowing liquids and opening to receive food only. Now, if—"
