

BUSINESS NOTICES.

As the design of the CANADIAN DRUGGIST is to benefit mutually all interested in the business, we would request all parties ordering goods or making purchases of any description from houses advertising with us to mention in their letter that such advertisement was noticed in the CANADIAN DRUGGIST.

The "old reliable" Payson's Indellible Ink is brought to your notice in this number of the DRUGGIST.

Druggists are invited to correspond with the Western Leather Mfg. Co., of Chicago, when requiring anything in the line of physicians' cases, etc. See their advt.

The Evans Chemical Co., of Cincinnati, advertise their specialty in this issue. "G" is being rapidly introduced and largely advertised and no doubt will have a large sale.

The Drummond Medicine Co., Toronto, call attention in this issue to their preparations, which they are pushing thoroughly and advertising liberally. See their advertisement on page 24.

The Electric Inhaler manufactured by the Franklin Medicine Co., Toronto, although only a short time before the public, already commands a ready sale. It is a taking article, sells at sight and affords a good profit. See advt.

Densoline, a petroleum product manufactured by the Cleveland Petroleum Co., is offered to the trade in bulk or bottled, also their various toilet preparations and other products. These goods may be obtained from the American Oil Co., Adelaide street, Toronto, to whom all orders should be addressed.

Garfield Tea is rapidly becoming one of the standard proprietary articles of Canada, and if liberal and judicious advertising has any effect, and who can deny its value, the sales of this article must rapidly increase. Write to the Canadian agents, D. Dunsmore & Co., Toronto, for a supply of their advertising matter and free samples and they will be forwarded free, by mentioning this paper.

Attention is directed to the open letter addressed to the druggists of Canada by the Wm. Radam Microbe Killer Co., in this issue. They claim that the formula published by several journals, purporting to be a correct analysis of their preparation, is entirely incorrect, and being anxious that druggists alone should handle their preparations, solicit correspondence from them.

Harvard Bronchial Syrup, which is advertised in this number, is manufactured by A. J. Lawrence from the receipt of one of the medical faculty of the celebrated Harvard College, and is pronounced to be one of the best remedies now in the market. Mr. Lawrence has been obliged in consequence of the increased demand for this preparation to move his laboratory to Montreal, where in future all orders should be addressed.

In a recent issue the Boston *Christian Leader* says: "It is not saying too much to state that there is no preparation of the kind comparing with Imperial Granum as a delicious nutritious food, and there is nothing that can be taken for a dietary food that can equal it. We know its merits because we have used it ourselves with the greatest benefit." The manufacturers advertise this article with elegance and good taste, and it is a standard article on stock lists from Maine to California. The sales for the year 1889-90 are the largest on record.—*The Druggists' Circular*, New York, April, 1890.

Many druggists like to wear an emblem of their business, and we illustrate two such recently brought out by a jewelry house of New York, which are both pretty and appropriate. The pin is of solid silver with blue

enamel and presents a neat and attractive appearance. The retail price of the pin is 75 cents. The watch charm is a nice looking mortar cut in colored onyx, with rolled gold pestle and trimmings. It retails at \$1.50, for which amount it will be sent by mail. These pins were adopted as the official badge at the last meeting of the Missouri Pharmaceutical Association, the members wearing silver pins and the officers wearing gold ones. See advt. of Duryea Jewelry Co. on page 10.

A New Excipient.

According to the *Jour. de Conn. Med.*, August 7th, M. Adam, a Parisian pharmacist, has produced a resin soap "which may be recommended as constituting a new pharmaceutical excipient." The formula is as follows: Resin, 100 parts; carbonate of potash, 30 parts; water, 300 parts. The components are heated to the boiling point, when an effervescence takes place, the product being finished when the disengagement of gas ceases. The heat may be continued, however, until any desired consistency is obtained. The product may be made hard, if necessary. This soap is soluble in water and does not give a precipitate with marine salt. It may be used as an excipient for a great many drugs, and it has the advantage of being less costly than either vaseline or cerate. It should not be used with metallic salts, owing to the liability to double decomposition. Resin soap works well with mercury and mixes freely with camphor, naphthol, sulphide of carbon, tar, &c. It does not make a homogeneous product with the oil of cade. It appears to have been serviceable thus far in the preparation of some of the remedies used by veterinary surgeons.—*American Jour. Pharm.*

Absolutely pure sulphur is now obtained cheaply from hydrogen sulphide.

Kerry, Watson & Co., WHOLESALE DRUGGISTS, 351 St. Paul St., MONTREAL.

We call attention this month to the following recent importations, and invite correspondence from buyers. Samples and quotations given promptly.

Purchasers will consult their own interests by getting our prices before buying.

Virgin Olive Oil in 1 gal. cans
Virgin Olive Oil in 5 gal. cans
Virgin Olive Oil in flasks
Castile Soap, Dragon Brand, White
