The advance was based chiefly on a report by a private crop expert, giving the present condition of Kansas at 68, with an abandonment of 10 per cent. of the acreage. Should his figures prove correct, it would still leave an acreage of 6,000,000, compared with 4,300,000 at harvest last year, and a five-year average of approximately 5,800,000 bushels. large percentage of the acreage did not germinate until late in February, after the rains, the growth at the present time would naturally be very small. The so-called bad crop news probably saved the market from a further break, and once again encouraged buying on the part of professional traders. Corn—The market was heavy in tone all day, showing decided weakness during the early part of the session, but rallying later in sympathy with the strength in wheat. The May futures were relatively the weaker, reflecting the dulness of the cash demand and large stocks.
