

ANNUAL ANNOUNCEMENT
OF THE
WOMAN'S MEDICAL COLLEGE
TORONTO.

The ninth session of the Faculty will be opened on Thursday, October 1st, 1891, by an Introductory Lecture at 3 p.m. The regular lectures will begin on October 2nd at 9 p.m., and will be continued for six months.

The Faculty take great pleasure in calling attention to the successful completion of its new college building, which was opened last session. A cut of this building will be found elsewhere. It is one of the most complete buildings of its kind in America. Among other rooms it contains a large Lecture Hall, fitted with special students' chairs, movable blackboards, chart frames, and accommodating over fifty students; the Microscopical Laboratory, on the 1st floor, is modelled after the well-known Biological Department of Toronto University, and each student is provided with the requisite space and appliances for the best work in Microscopy. On the same floor is the large Chemical Laboratory, fully equipped, and with accommodation for 37 students. Adjoining the Microscopy room is a commodious waiting-room, set apart entirely for the use of the students, and provided with books and journals; connected with this room is a students' lavatory.

The building formerly occupied as a College has been remodelled and now forms the dissecting-room, being entirely separated from the main building and thus conducing to the health and comfort of the students.

Recognizing the great importance of the clinical study of Diseases of Women and Children to women students, the Faculty have still further amplified the course of instruction on these subjects by the addition of special practical classes in Gynæcology and Diseases of Children.
