SHOULD BE USED
wherever definite atmosphere conditions
are being maintained

Bristol's Portable Thermo-Humidigraph, Model 4069. Eight inch chart. Specify Model 4068 for surface mounting in permanent location. Charts for 24 hour or 7 day records. Model 4044 four inch Humidigraph, with-out pen arm for recording temperature, also available.

By providing a continuous record both of temperature and relative humidity, Bristol's Thermo-Humidigraph makes it possible to check continually the atmospheric conditions under which a product is being made.

As one manufacturer puts it, "Bristol's Thermo-Humidigraph should be used as a check in all localities where a definite atmospheric condition is being maintained. We find this instrument very rugged and reliable, and use it to record conditions in various departments." Write for Bulletin 4132.

MINING ELECTRICIANS

Say: "Triangle exceeds Specifications. We know what that means in safety!"

Triangle Double-Bushed Bonded Armored Cable is thoroughly appreciated where safety is of first importance. Safety, not only to human life, but to equipment that represents heavy investment and is so far removed from an easy source of replacement.

Mining men specify Triangle Armored Cable with complete confidence. They've inspected this superior cable themselves and approved it. A tinned copper Bond Wire runs between the steel armor and the paper insulation in the cable. This wire, together with extra insulation and easy insertion of insulating bushings over Crimped Paper results in a highly efficient, reliable cable. Approved by C.E.S.A. and labelled under the supervision of Hydro-Electric Power Commission of Ontario.

And endorsed everywhere by men who know the value of extra safety.

For special applications armor can be furnished in aluminum or other alloys.

This Bond wire acts as a lightning rod for the safety of your electrical installation. After bushing has been inserted under the armor and over the crimped paper, tear off crimped paper here, thus providing double-bushed protection where it is most needed. Patent No. 281095, Patent No. 284950.
