How Farmer's Can Practice Conservation.

Canada being a nation of farmers has to pay a very large seed bill each year. Last year our crop called for 33,000,000 bushels of seed grain—wheat, oats and barley, and we are constantly increasing our agricultural acreage. This being so, the economy of sowing good clean seed is at once apparent. The advantages to be derived from it are like the proceeds of a sum of money laid out at compound interest—they are cumulative in their effect and grow in ever increasing ratio. Some years ago a competition was carried on in some 450 places in Canada to see just what the actual results of using clean pure seed would be. If we reason from the results obtained from it, we find that our grain yield last year would have been increased by 190,000,000 bushels had clean vigorous seed been sowed on every acre under cultivation. Now, 190,000,000 bushels of grain would fill 1,500 miles of railway grain cars. It is such a large amount that it is hard for the mind to comprehend, but, at any rate, it goes to show that it would pay our farmers to be particular about the kind of seed they sow.
