The Dominion Railway School, Dept. R, Winnipeg, Man.

The SUCCESS MANURE SPREADER

**OLDEST
NICEST WORKING
BEST WORK
LIGHTEST DRAFT
MOST DURABLE**

The "Success" has the largest rear axle and strongest drive-chain of any Spreader made. It is the only machine with Boster frosting-device, and many other points covered by strong patents. Our catalogue tells all about it and gives much valuable information for farmers. Write for it.

MANUFACTURED BY

The Paris Plow Co., Limited.
WESTERN BRANCH: WINNIPEG, MAN. PARIS, ONTARIO.

POTASH

has no substitute and is an essential ingredient in a "Complete Fertilizer" for Farm, Orchard and Garden, and can be obtained from all leading Fertilizer Dealers and Seedsmen in the highly concentrated forms of

MURIATE AND SULPHATE OF POTASH

Experiment on "HAY" in 1908
Conducted by E. EMSLIE, Oakville, Ont.
Plot 1 Plot 2 Plot 3

Fertilizer per acre	130	300	Muriate of Potash.
	300	300	Acid Phosphate.
	120	120	Nitrate of Soda.
Yield per acre in lbs.	2232	4224	3204

This experiment shows an increase of 1000 lbs. directly due to the application of POTASH.

In the accompanying experiment the inclusion of POTASH in the fertilizer not only increased the yield but it also greatly improved the feeding quality of the crop.

For full information regarding this important "Plant Food" ingredient and copies of our free publications, including—

BALE YOUR HAY WITH I. H. C. PULL POWER HAY PASSES

UNQUESTIONABLY It pays any hay raiser to own an I. H. C. pull power hay press. Well baled hay brings the best price.

To sell hay at all in some markets—or to reach a market where you can get the best price—in most cases your hay *must* be baled.

You can draw bigger loads of baled hay, thus saving time, perhaps double time for teams and men.

Baled hay retains its nutrition and remains in first class condition longer than hay in the stack.

With your hay baled you can *wait* for the right market and get the *best* price because you can move it *more* quickly.

Other Advantages

Bale your own hay first, and also make extra profits baling your neighbor's hay. An I. H. C. one-horse press with two men and a boy will easily bale eight to ten tons per day under average conditions—uniform bales in size, neat and compact. The bale chamber is 14 by 18 inches.

The I. H. C. two-horse press under similar conditions, will bale 12 to twelve tons a day. Bale chambers are 14 by 18, 16 by 18, or 17 by 22 inches in size. Both I. H. C. presses will bale any kind of hay or straw including timothy, clover, alfalfa, wild hay, shredded fodder, pea vines, etc., etc., the capacity varying of course with the material being baled.

Especially Desirable Features

I. H. C. hay presses do first class work rapidly—require a very small force of men—are most convenient and simple to operate—require no experience—are easy on the horse or horses, having no pounding or uneven draft to worry or chafe the team.

The I. H. C. pull plunger is a great improvement over the ordinary plunger.

These presses have large feed openings—perfect working roller tuckers—are durable, simple and have efficient powers, operating on the compound lever principle, with *no extra draft* when pressure is greatest. Only 4-inch step-over for the horses and are full circle types, doing away with constant stopping or jerking. There are two strokes of the plunger to one revolution of the screw. I. H. C. presses are made principally of steel and iron—are compact and strong for long service—not at all flimsy, although neat in design. Write nearest office for catalog and other information. Call on the local International agent and inspect these presses.
