Canada's Helium Gas.

Helium gas rising out of the ground in Alberta and other parts of Western Canada, and now used, in some localities of that country, to do the family cooking, may one time be carrying Britain's lighter-than-air flying machines in all parts of the world. It has been stated that there is enough of this gas, which makes a satisfactory substitute for the highly inflammable hydrogen commonly used for airships, to supply the entire British Empire for many years. The wells in Western Canada are the only sources of the gas in the Empire. Its weight-supporting ability is 90 per cent. that of hydrogen. Aviation is occupying a good deal of attention in Canada, and this natural supply of the filler for gas bags of dirigibles promises to advance interest in air navigation.

Dry Dock In St. John, N.B.

Work is being pushed on the Courtenay Bay dry dock and breakwater by the St. John Dry Dock & Shipbuilding Co. An appropriation of \$700,000 for the contract has just been made by Parliament. It is anticipated that a British shipbuilding firm will establish a mammoth plant in the vicinity of the dry dock.

Bears Kill Trees.

Hundreds of trees in the Northwest, including Douglas fir, white fir and western white pine—the wood of all of which is used more or less in airplane construction—have been seriously damaged by bears peeling the bark. About 100 trees to the square mile have been peeled.
