NATURAL HISTOTY OF THE HONEY BEE.

The lecture of Dr. Morris before the Smithsonian Institute at Washington, District of Columbis, upon the above subject, is smit to have been true receiving.

The industry and wonderful instinct of this little insect was eloquently set forth by the speaker. The heragonia cell of the bee was demonstrated to be just that mathematical form which combines the greatest capacity with the least expenditure of wax. A cylindrical form would, by the infersificas occurring televes the cells, occasion as waste of speic. The popular idea that the bee procures its wax and loney direct from flowers, but requires elaboration prior to taking the shape of wax or honey. The naternal is obtained from flowers, but requires elaboration prior to taking the shape of wax or honey. The lecturer showed, by illustrations upon the wall, the curious manner in which the bees hang in clusters while callobrating the wax in thin scales upon the breast—as process requiring some twenty-four hours—and of the manner in which the bees hang in clusters while callobrating the wax in thin scales upon the breast—as process requiring some twenty-four hours—and of the manner in which the bees hang in clusters while callobrating the wax in thin scales upon the breast—as process requiring some twenty-four hours—and of the manner in which the breast hang in clusters while callobrating the wax in thin scales upon the breast—as process requiring some twenty-four hours—and of the manner in which the breast hang in clusters while callobrating the wax in thin scales upon the breast—as process requiring some twenty-four hours—and of the manner in which the first deposit of wax is made upon the roof of the hire on the commencement of building operations. The labor in a bee hive was as systematically divided as a manger as holy of mechanics. It was, indeed, asserted that a master be overlooks the operations of the other workmen, and where a bad piece of work is done, and the point of wax is made upon the roof of the hire on the comm

jects. Should she be abstracted from the hive the whole swarm is thrown into confusion, work is suspended, and all motive for exertion seems to be wanting in the absence of their sovereign. Should she return, they exhibit marks of satisfaction and resume their labors.

For twenty-four hours after the departure of a queen the swarm will accept no substitute. After that time they will accept another queen, and instate her in all the honors and dignities of the departed one. Should a strange queen poke her nose into a hive which has a queen of its own, the bees form a circle around the intruder, not to do her honor, but to prevent her departure. The queen in possession is then summoned, and the two queens are made to fight for the sovereignty.

is then summoned, and the two queens are made to fight for the sovereignty.

Commenting upon analogous habits of insects and human beings, the lecturer related an amusing incident that had transpired on the occasion of a former lecture at the Smithsonian Institution, the subject being "The Ant." Accompanied on his way to the lecture-room by two members of Congress, who were slaveholders, he told them he was going to establish that ants were slaveholders, and that the slaves were black. "O!" said they, "be sure you make the most of it!"

The wonderful fact has been established that every

that ants were slaveholders, and that the slaves were black. "O!" said they, "be sure you make the most of it!"

The wonderful fact has been established that every working bee is capable of being developed to a queen bee. In case of a queen being wanted, on occasion of the old queen having left the hivs with a swarm, it had been ascertained that the remaining bees take common larva and deposit it in the queenly celle, where, by different food from that dispensed to the working bees, and a different mode of treatment, it is developed with queenly size and attributes.

The wonders of contomology demonstrated forcibly the saying, "Truth is strange—stranger than footion." The awarming of bees was described by the clutter. It was merely the departure of a queen with a awarm of followers from a redundant hive. The immediate occasion of such an emigration was generally through a huff taken by the queen bee at being interrupted in the slaughter of her offspring by the other bees, when they deemed she had gone far enough; thus she usually went off in a high state of excitement. There were various modes employed to induce a swarm of bees to settle—such as bearing fin pans, in imitation of thunder, of which they have a dread; or throwing sand upon them, to give them the notion that it is raining; and an instance was related of an old gentleman who had a way of leading a swarm to any required locality by a peculiar mode of whistling. The stmosphere of a crowded hive is close and bot; but the bees, by motion of their wings, ventilate it until enough swarms have been thrown off to render the labor unnecessary. Desperate conflicts occur between bees, sometimes lasting for days. They are duellists, thieves, and highway rob bers. They compel the pompous, humble bee to disgorge his honey. In the sense of amendity the beer is supplied to its own hive with unerring accuracy. In the whird of bees, when the air is filled with them, were also acute.

The fact was tated that the bee cannot repeat its time many times, the poison becomi

The fact was stated that the bee cannot repeat its sting many times, the poison becoming exhausted. Should the sting, which is barbed, remain in the wound, the bee dies. Same persons are not affected by the sting of the bee, while others die of it. The lecturer, however, expressed the opinion that where it death resulted, it must be owing to the condition of the blood of the victim. He discredited the truth of the report that a young man out West had died lately from a spider bite. It required more evidence to establish the fact of a spider bite resulting fatally.

by the sting of the bee, while others die of it. The lecturer, however, expressed the opinion that where death resulted, it must be owing to the condition of the blood of the victim. He discredited the truth of the report that a young man out West had died lately from a spider bits. It required more evidence to establish the fact of a spider bite resulting fatally.

Who is a Gentrastan.—A gentleman is not merely a person acquainted with certain forms and conventionalities of life, class and solve in the world without awkwardness, and free from habits which are vulgar and in bad taste. A gentleman is something much beyond this. At the base of all his case and refenement, and tact and power of pleaning, is the same spirit which lies at the root of overy Christian virtue. It is the thoughtful desire of doing in every instance to others as he would that others should do unto him. He is constantly thinking, not indeed how he may give pleasure to others for the mere sense of pleasing, but how he can show them respect, how he may avoid butting their feelings Whon he is in society he acrapulously ascertains the position of every one with whom he is broadlessly hart their feelings Whon he is in society be acrapulously ascertains the position of every one with whom he is broadlessly hart their feelings which are yenonal defect, buildy deforming, inferiority of talled, of sank, of reputation, in the persons in these society he is pleaced. He never assumes any superiority—sever ridicules, never boasts, never makes a display of his own powers, or rink, or a danger cable to children and the surface of the persons in the way of mature, saddy corrupt and disordered; and nature will have its share of the man in spite of all his offers to deherase as not here; it cannot be found in the way of mature, saddy corrupt and disordered; and nature will have its share of the man in spite of all his offers to deherase it.

ces. The lecturer would not, however, youch for the truth of this statement.

Amongst bees there was no law prohibiting females from mounting the throne; on the contrary, no male was permitted to assume the sovereignty. The queen bee allows no rival near the throne. She attacks and kills, with the greatest fury, the young queens, her own offspring, and this by a wise ordination of Providence; thus preventing an increase beyond the power of the working bees to feed.

The queen bee is treated with the greatest possible reverence, precision and politeness, by the subjects. Should she be abstracted from the hive the whole swarm is thrown into confusion, work is suswhole swarm is thrown into confusion.

DR. A. JOHNSON'S AMERICAN ANODYNE LINIMENT, COUGHS, COLDS, INFLUENZA,
Bronchitis, Asthma, Pain in the Sides or Breast, Rheumatism, Cramp in the Stomach, Spitting of blood, and all-Lung
Complaints, Manufactured by I. 8. JOHNSON, Banger, Maine,
Da. A. JOHNSON'S AMERICAN ANODYNE LINIMENT,

this disease it has been wonderfully successful. Those who had cases of long continuance have found permanent relief. S. D. Ward, Esq., (No. 10 Court Street, Boston) who had a case of three, years' standing has kindly permitted us to refer to him in proof of the efficacy of this valuable medicine; also in the case of a Rose-Cold. This cold comes on when the flowers bloom in the spring, and continues till the leaves fall in Autumn—if this disease is not attended to in season, it ends in consumption. Take of the Liniment according to directions, and a cure will result.

oar at night before going to bed, and take it internally according to directions.

In all Coughs, the Anodyne Liniment is a well known remedy, particularly for Whooping Cough. The first symptoms should be checked, and not the least difficulty will occur in the case of this complaint. For children, half a tenspoon full of Liniment in the complaint so common in all countries, especially in this climate, stands unrivalled, and in every case, a complete trial will be marked by the most complete success.

The Blind Piles. The Anodyne Liniment has in a great number of instances of this distressing disease, made permanent cures. In connection with taking the Liniment internally, external application should be made.

The sale of this invaluable medicine is rapidly increasing, and the Proprietor can say with confidence that he has been, the favored instrument of giving relief to thousands of the sfflicted and suffering. He earnestly solicits all who may be afflicted to give this Anodyne Liniment a fair trial, satisfied that if taken with a full determination to test its utility, they will find relief.

JOHNSON'S CATHARTIC PILLS.

Sugar Coated, in Glass Bottles.

For the Care of a great variety of Diseases, arising from the impurities of the Blood, and Obstructions in the Organs of

For the Cure or a great variety of the Core of a great variety of the Organs of Diseases, with the most Diseases, with the most decided benefit, and without fear of injury. Being of Vegetable attract, they do not cramp or rack the delicate frame or weak constitution, but will be found particularly useful, by stimulating the weakened and distempered parts into healthy action.

The most delicate female, and children of the tenderest age, can take these Pills with perfect safety, and the most salutary results will follow. Being coated with pure White Sugar, prevents that general aversion which most persons have to ordinary Medicines, for nothing but the taste of sugar is apparent when administered.

They are an excellent article to be taken

They are an excellent article to be taken

In the Spring of the Year,

To Invigorate and give Tone to the System.

These Pills have a great advantage over other Sugar-coated Pills, in that they are put up in GLASS BOTTLES, well corked; consequently will keep for any length of time without injury, and are not affected by damp weather.

The Proprietor of these Pills has spared no expense in getting ap an article that he trusts will meet the universal approbation of the public, and he does not doubt they will, when known, take a stand beside his well known and extensively appreciated AMERICAN ANODYNE LINIMENT.

They are purely Vagetable in their composition, are peculiarly mild, give no pain, yet efficient in their operation, and require no change of diet or confinement while taking them. They are curre only a trial, and need no puffing to recommend them. Price, 25 casts per bottle.

For sale at the Apothecaries' Hall, and at the Drug Stores of W. R. Waston and M. W. Skinner, and sold at all the Stores throughout the Island. Persons wishing supplies of the above Medicines, can be furnished at Proprietor's prices at the Drug Store of M. W. SKINNER.

or suspicion, while at measures to baffle any be made. On deck, the acting ostensibly as a gubut prepared for hostilithes ame time, the ship and trained so as to swee In the cabin, where Mr. ors, he was seated on him, so as to prevent au order the pillow, which of loaded pistols were comirror was placed, and four men, each with four signal were to throw deslves armed. Thus for and received his disting courtesy. No attempt a courtesy. No attempt's Hassim remained till the precautions taken again. On another occasion, a ment was established, a maine Lingire, made at head. He came to Saratensibly to pay a visit to of that place, and moore their campongs, a few he house. At length, one purpose, he dropped sile wharf, fastened his boar armed men. He then we the hall where the rajai ing all the European in his men, placing thems table, squatted down, in time in the confusion of soon as Mr. Brooke saw he suspected his object, fortunately understood the river and tell the quickly as possible. The not understood by the D had merely given some servant leave the room quietly and intently survaiting the signal of meantime, the European best appetite they could epended on their proloble, they were in no painful state of suspen were at length delivered mang-gong—a brave old ried on his depredations entered the room at the once placed himself bet and turning upon Ling thets the reverse of comp what he had come for, down to his boats. The eighty to thirty, and he of a combat; but while entered with fifty men, like a beaten dog. What it out publicly that his jah's head, and he furtatill to have it; nay, he basket for the special should be captured. He thought better of the me he was esated at the ra and drinking arrack.

The Sarawak territor long low dark coast-line edge, and occasionally era, or broken by bold far into the sea. Behir
