ANTONI MICHAEL.

Margin Trading!

Many investors have a mistaken idea of marginal trading. When an investor buys a stock on margin a certain portion of the cost, usually one quarter to one third, is immediately dethe cost, usually one quarter to one third, is immediately deposited, the broker carrying the balance on account. Should the stock drop in value the investor is required to maintain his proportion by a further payment, which payment, however, reduces the debit balance so that under no circumstances, no matter how often margin is called for, a client cannot pay in more than the original cost, and when a client is prepared to do that, it is physically impossible to lose the account. Marginal trading is a simple and capable method of investing if investors do not overbuy.
