

French origin. "White" and "Blue," growing extensively along the shores of the St. Lawrence, below Quebec, and reproduced from suckers.

#### BLUE ORLEANS AND BLUE IMPERIAL.

Thousands of these trees are grown along the north shore of the St. Lawrence, just below Quebec, and on the Island of Orleans, on all kinds of soil, from light gravel to a rather stiff clay. They should be tried here.

Fruit: Medium size—Color: Blue, with a bloom.—Flesh: Greenish yellow, firm—of decided merit. It may be shipped in barrels.—Season: October.

#### YELLOW ORLEANS.

Also largely grown near Quebec, is larger, but has much the same character as the Blue.

Try these when the other imported varieties fail. Have the suckers from the farmers owning old plum orchards in the Counties of Montmagny and L'Islet, or purchase the plants at A. Dupuis', Village des Aulnais.

He is the only nurseryman propagating these well known productive, hardy varieties, and without doubt, the only profitable in the Province. Over 100 years of experience proves the above statement of hardiness and productiveness.

---

### CHERRIES.

The old French variety cultivated here, is so hardy and so well known to produce heavy crops, that details of its profitable culture is unnecessary.

---

### SMALL FRUIT.

The small Fruit, such as Strawberries, Raspberries, Blackberries, Gooseberries, Currants, etc., ripening from the first of June till Fall, are everywhere capable of successful cultivation, and yield large returns at comparatively small expense. They should have a place in every garden. Since the introduction of the self-sealing jars and cans, they can be had throughout the year almost as fresh as when gathered.
