

## THE PERCHERON.

**W**HEN draft horses are mentioned the Percheron is certain to be high in the list. This particular breed has a head of medium length and wide between the eyes. The neck is arched and muscular. The back is short and strong; body round and close ribbed. The hind-quarters are broad and strong, the shoulders very muscular.

It is very difficult to draw the line between Norman and Percheron. In the Stud book all animals imported from France are registered as either Normans, Percherons, Percheron-Normans or Norman-Percherons.  "International Stock Food" saves one quart of oats every feed and keeps work horses in better condition.

### SOME COMMON HORSE DISEASES AND BLEMISHES.

**THRUSH**—is a disease of the frog, which often becomes rotten. "International Honey-Tar Foot Remedy" is the finest preparation ever put on the foot of any horse. It restores the natural, healthy condition.

**THOROUGHPIN**—is caused by hard work and has the nature of Bog Spavin. Puffs are located in front of the hock and appear to be filled with air which can be pressed back and forth. Seldom causes lameness.

**CURB**—is an enlargement on back part of hock, sometimes half an inch thick. Caused by a sprain. We guarantee a cure, while your horse works, by the use of "International Compound Absorbent."

**BONE SPAVIN**—is a disease of the hock joint, and soon develops a bony lump in the joint which causes lameness. It is generally started by a sprain. "International Compound Absorbent" stops the lameness.
