Amongst the largest mines in Quebec may also be mentioned the Capelton and Eustis, the latter of which is owned in Boston, and is producing about 1,500 tons of ore a week.

There are other Copper Companies operating in Quebec, most of which are also owned in Boston.

The Copper property at Actonvale, known as the Acton mine, has recently been re-opened and is to be operated on a much larger scale than ever before. A smelter has also been established at that point for the purpose of treating Copper and other ores.

It is needless to go into an elaborate treatise on Copper. Everyone knows its uses—everyone knows the enormous sums which legitimate Copper companies, properly operated, have returned to stockholders.

Copper mining, where attention is paid to the mine, and not to the stock market, is one of the surest methods of returning large interest on capital invested.

One who reads the irresponsible section of the public press can gain no idea of the real conditions of affairs.

The average reader has an idea that production exceeds demand, but, taking the record by years, quite the contrary is the truth.

J. Parke Channing, who has just returned from a European trip, says: "When one realizes how short a time ago consumers were clamoring for Copper metal at 25 cents, the present price seems ridiculously low, and it certainly cannot be expected to continue for a very great length of time."

THE WALL STREET SUMMARY, one of the leading financial papers of the country, says: "The outlook continues the same as before, and there is no change in the basis for believing that we are to enter a period of record-breaking consumption as well as production of the red metal. The boom in the Steel trade is evidence of a vast amount of construction work under way, and it is safe to assume that the Copper interests will get the benefit of this condition as well as steel interests. Aside from this, the revival in general business will naturally increase the consumption of Copper in the arts, and above all is the coming electrification of the railway systems of the country.

"The use of the telephone is constantly extending, and, in any direction one looks, it becomes clear that we are living in an age of electricity, during which the use of it will increase, and with such an increase there must be a larger demand for Copper. Hence, while patience is necessary, all who are looking for higher metal prices and a greater consumption will be satisfied with the eventual outcome of the existing conditions."

The biggest dividend payers among all the mines in the world are Coppers. Remember that!

Boston, which is the heart of Coppers, is optimistic, and the larger interests believe that an enormous demand will soon arise.

When the reader remembers that such men as Cole, Ryan, the Guggenheims, Phelps, Dodge and Co., Voglestein, and J. P. Morgan are
