POLICE UNEARTH TICKET SWINDLE ON C. P. R. LINES

Winnipeg Storekeeper Arrested
in Believed Dominion-
Wide Scheme.

ESTIMATE HUGE LOSS

Conductor Confesses To Ac-
tivities and Reveals Methods
of Syndicate.

Canadian Press Despatch.
Winnipeg, March 7.—A ticket swindle scheme in which the Canadian Pacific Railway was said to have been defrauded out of thousands of dollars, operated by a syndicate which may be Dominion-wide, was disclosed in police court yesterday when the preliminary hearing of Max Portigal, a local storekeeper, on two charges of conspiracy and receiving stolen goods, was commenced.

Turned King's Evidence.

Giving evidence for the crown under protection of the court, A. Andrews, former sleeping car conductor, turned king's evidence and revealed operating methods of the syndicate. He confessed to arrangements between Portigal and himself in the furtherance of the ticket scheme.

"Portigal told me that if I would hold out tickets from my returns and sell them to him at one-quarter of the cost he would retail them at half price and they would share fifty-fifty," Andrews testified. "I was able to comply with this plan by omitting to present railway tickets obtained from the passengers to the train conductor and handing them over to Portigal without punching them. They were practically the same as new."

Disclosed Methods.

Evidence was also given during the morning by four operatives of a private detective agency who disclosed methods of an organization working in all large western towns and cities in a similar manner to that in which Andrews was engaged. Arrests in western cities are pending in connection with the case, railway investigating officials intimated to the court today.

Portigal elected to be tried by jury on the two conspiracy charges.

COURT DEFERS PENALTY ON CONVICTED THIEF

Judge Ross, St. Thomas, Grants
Request of Crown
Attorney.

Special to The Advertiser.
St. Thomas, March 7.—Judge Ross again deferred sentence in the case of A. Snoswell, the young English immigrant who pleaded guilty several days ago to stealing a kodak from an Aymer druggist. Crown Attorney McCrimmon, who is investigating the case, recommended the adjournment.

Yesterday L. Bridgeman was brought into police court charged with non-support, and will be given a hearing on Wednesday morning. It appears that Bridgeman, who has been working in the country, came into the city yesterday to get his clothes. Members of the family immediately notified the authorities and asked that he be made contribute to their support.

TELLS DEVELOPMENT MANUFACTURING INKS

L. Schwartz Details Various
Processes in Separating and
Blending Colors.

PHYSICS VALUABLE

Prof. Allen of Varsity Gives In-
teresting and Convincing
Demonstration.

"Color" was the subject of the latest of the series of science in industry lectures held last night in the old Medical School on Waterloo and York streets, under the auspices of the chamber of commerce. Alfred Burton of the Middlesex Mills spoke on the color question in the dyeing industry. L. Schwartz of the National Ink Company of this city gave a most illuminative address on printing inks, and Mr. Allen of the physics department of the Western University, detailed the various processes by which the physicist separated and blended colors. D. H. McDermott, the chairman of the evening, announced at the close of the meeting, that next week at the regular lecture, Prof. White of the University of Michigan would be the speaker of the evening, and that the subject of this lecture would be of special interest to all metal workers.

He also stated that at last night's meeting it was the original intention of the committee to invite a speaker from New York to speak on color, but that they had refrained from so doing because it was felt that a much larger audience than had so far turned out would be required to make the meeting complimentary to the speaker.

Development of Inks.

Mr. Schwartz told of development of the manufacture of printing inks, from the centuries-old inks used by the Chinese, embodied in an early vehicle, down to the very modern aniline dyes used today in a water vehicle.

All printing inks were composed of oil, generally linseed oil, and pigment. They do not dry by evaporation but by absorbing oxygen, and are so slow acting in this respect that various driers are used to hasten their action, usually some preparations of manganese or lead.

The addition was able to cause drying of the colors in from six to ten hours in many cases, whereas without them the colors might take from 30 to 40 hours to dry.

The art of lithography was the art of superimposed colors, and the latest development of the lithographic art was the four-color process, in which the finished color scheme was obtained by juxtaposition, in contrast to the addition and subtraction theories obtained in the other coloring arts.

The colors used today in printing were composed of those that had an earthy basis, such as iron blues and chrome yellows and the aniline colors, which had a water base and were transparent. Alfred Burton showed that in mixing the various colors in the dyeing process the method used was addition and juxtaposition, and that the subtraction process used in the blending of some lights was not possible in this industry.

Advices Spectroscope.
He advised the use of the spectroscope by the chemist, who had to combine colors for drying, as being the only way in which the various elements of a color would be detected with accuracy.

He pointed out that the chemist had to a great extent come into his own in industry, but that the physicist was almost an unknown quantity. In the future, he said, the man who is a specialist in physics will come to be recognized as being an invaluable partner in the industry.

Mr. Allen of the Western University, department of physics, in most interesting demonstration of the way in which colors were blended and split up into their component parts, illustrated by experiments, proved by various means that color was just a matter of light.

So-called colors in different lights appeared to vary, and he showed convincingly that this was the case in the course of his demonstration. Various colors were formed by three means, the addition, subtraction and juxtaposition of the primary colors. He explained minutely the theory of selective absorption and contributed an excellent explanatory address at the opening of a lecture on color.

FARMER FINED \$10 ON CRUELTY CHARGE

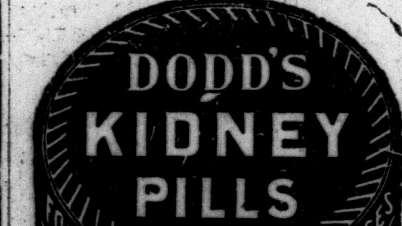

Morris Goldenberg, Hyde Park,
Convicted On Complaint of
Humane Inspector.

Morris Goldenberg, a farmer residing near Hyde Park, was fined \$10 and costs in county court yesterday afternoon by County Magistrate Hawkshaw for ill-treating his cattle by allowing his stable to be kept in an unsanitary condition.

Inspector George Tustin of the London Humane Society, who laid the charge against Goldenberg, told the court that he visited the defendant's farm on February 21 and found the cattle in a very neglected state and a dead carcass of a calf in the stall where other calves were kept.

The inspector also complained that the barn was exceedingly filthy and that the cows were without bedding. On that occasion he warned Goldenberg that the barn must be cleaned and that the carcass must be removed, but on returning February 27 he found that nothing had been done to remedy conditions.

Goldenberg declared that the calf had died on the 26th of the month, and the fact of his having a sore

DODD'S KIDNEY PILLS

RHEUMATISM
GRAVEL
DIABETES
BACKACHE
4087 THE PRO

foot at the time prevented him from removing the carcass. The dead animal was removed, however, on February 28.

Three neighbors of the defendant, including a veterinary surgeon, stated that they had visited Mr. Goldenberg's barn yesterday morning and found conditions to be good, but the court ruled that by not removing the carcass of the dead calf and by not keeping the barn in a sanitary condition, Goldenberg was guilty of ill-treatment of his cattle and so imposed the fine.

W. B. Henderson acted as counsel for the plaintiff and H. B. Neely for the defendant.

PREACHES UNION SERVICE.

Special to The Advertiser.
Southampton, March 6.—Rev. Dr. McMillan of Toronto, secretary of the Presbyterian Church of Canada, conducted services for the united congregations of North Bruce and St. Andrew's, Saugeen, Sunday. He delivered a very interesting and instructive address.

Every Section Is Resplendent With the Glorious New Goods of Spring

WHAT A JOY it is to see the New Fashions unfold this spring! Perhaps never before—at least, in modern democratic times—has Fashion been so lavish with exquisite apparel and accessories for feminine use and adornment.

What perfectly adorable frocks we see—what amazing millinery—what fascinating coats and wraps—the long, wrappy kinds and the short, piquant sorts, with their bizarre effects!

What delectable blouses, and what colorful sweaters!

And what a bewitching assemblage of those "trifles light as air, that weigh so mightily in the scale of smartness," as a famous writer puts it.

Then the neckwear, the veils, the gloves, the silk stockings, the new hair ornaments. It has been a constant procession of delights for us, as we opened the magic cases that brought all these wonderful beauty-things, and it will prove equally fascinating for every lover of new fashions to come and see the delightful collections now on display.

Every day is "Exhibition Day" while the glorious new things of Spring come forward.

MIDDLESEX RANKS HIGH IN CATTLE BREEDING

Department Statistics Show
Value of Animals Sold in
1921 Totalled \$2,308,320.

The 1921 statistics of the Ontario department of agriculture show that in the raising and sale of cattle, poultry and milch cows, Middlesex stands at the head of the list of counties in the province, and comes second in horse breeding.

The number of cattle sold was 50,280, and totalled a value of \$2,308,320. Huron County was in second place with 39,771 sales. During 1921, 51,142 milch cows were browsing in the

county, and were worth in the neighborhood of \$3,127,323.

Simcoe County boasts more horses than any other county in Ontario with a total of 33,686. Middlesex ranks second with 31,567 animals valued at \$3,509,790.

The number of acres of assessed land in Middlesex in 1921 was 707,755; acres cleared, 673,361; woodland, 55,272; slashed land, 16,865; and swamp land, 12,457.

ALD. W. WILSON SUFFERS

FROM ATTACK OF "FLU"

Ald. William A. Wilson, ward

two's veteran councillor, is still confined to his home suffering from an attack of influenza.

He expects to be about again before the end of the week, and while he made a supreme effort to be present at last night's meeting of the council, was forced to abandon the idea.

OWEN SOUND WILL ASK RAILWAY INTERSWITCHING

Special to The Advertiser.

Owen Sound, March 7.—Chairman

Carvell and Commissioner Boyce of

Dominion Railway Board will be here Wednesday to hear a request from the city council, backed by a petition of almost all manufacturers for an order compelling the railways to give interswitching. A bridge across the Sydenham River will be necessary.
