Miscellaneous. Considerable has been lately said in four hours will check the most violent diarrhea, stomach ache, incipient cholera and dysentery. The milk should never be boiled, but only heated sufficiently to be agreeably warm, not too hot to drink. Milk which has been boiled is unfit for use. This writer gives several instances in arresting the disease, among which is the following:

The writer says "It has never failed in curing in six or twelve hours, and I have tried it, I should think, fifty have tried it, I should think, fifty reisome and causes illness. looked meat goes further, is more now ishing times. I have also given it to a dying and less injurious if over-fed, han in

eight months, latterly accompanied by one continued diarrhoea, and it acted on him like a charm. In two days his diarrhoea was gone; in three weeks he became a hale, hearty man; and now be grains and cooked vegetables. For man who had been subject to dysentery the raw state. nothing that may hereafter occur will growing fowls of any age this is the best staple food, when properly varied has also communicated to the Medical Times and Gazette a statement of the value of milk in twenty-six cases of typhoid fever, in every one of which its great value was apparent. It checks great value was apparent. It checks diarrhoea, and nourishes and cools the body. Perhaps suffering from diseases need food quite as much as those in health, and much more so in certain diseases where there is a rapid waste of the system. Frequently all ordinary food, in certain diseases, is rejected by the stomach, and even loathed by the prtient; but nature, ever benificent, has furnished tood that in all diseases is beneficial—some directly ourative. Such food is milk. The writer in the journal last quoted, Dr. Alexander Yale, after giving particular observations in the diagram of the cold cow. She steps slowly and clumsily about her business, but she makes the business pay well. She after giving particular observations upon the point above mentioned, its action in checking diarrhose, its nourishing properties and its action in soothing the body, says: 'We believe that ing the body, says: 'We believe that milk nourishes in fever, promotes sleep, wards off delirium, soothes the intestines, and in fine, is the sine quanon in typohid fover.' We have lately tested the value of milk in scarlet fever, and learn that it is now recommended by the medical faculty in all
