Larry Daiter

President

Beaver Chair Mfg. Ltd. produces a large variety of office, institutional and contract seating. Frames are of metal, chrome or painted finishes as well as a variety of wood frames and finishes. Goods can be made with customers' own coverings as well as a large range of decorator designs and colours, or leather.

The company publishes new literature every six to eight months or so, as product lines are expanded. At Beaver Chair we have great flexibility to adapt to your specific needs as well as the ability to cater to that smaller order which larger firms often dislike to accommodate. Although the firm produces a variety of office chairs in ergonomics, the major component parts are made in Canada. Restaurant seating is also a major part of the company's production, predominantly with steel frames.

The Canadian market has approximately 95% of the firm's sales, while the rest goes to the U.S. In the past, the majority of sales were to the U.S. as well as selling to Puerto Rico and Barbados. At the present time the firm is negotiating an exclusive contract for representation in the Middle East.

Beaver Chair Mfg. is interested in pursuing and developing sales worldwide, and welcomes requests or information regarding distributors or agents. The company is interested to discuss licensing arrangements either way to broaden their product line as well as yours.
