drying systems nic application of Quotations for Cobalt Mining Stock Undergo Another Reaction and Close Weak.

World Office World Office
Tuesday Evening, April 9.
Traders took the selling side of the Cobalt stocks again to-day, and in the absence of much outside demand found the process of marking quotations down a fair-ly easy one. The three issues principally involved were -Foster, Green-Mechan and Tratherny but the large body of trans-Trethewey, but the large body of traus-actions was in the first-named stock. The small shipments from the camp for last sick was an accessory to bearish activity altho these are well-known to be due to the bad state of the roads. Green-Mechan is weak under nonsensical rumors of flooding of the mine, and holders of these shares are pervous on that account. The market stended up towards the close, but was entirely lacking in strength.

WILL BUILD SMELTER,

Philadelphia Capitalist Intends to Treat New Ontario Ore.

A. M. Bilsky of Montreal was at the King Edward vesterdey. Mr. Bilsky is one of the ploneers of the Cobalt camp, having been the original ewner of the celebrated Beaver property. A controlling in-terest in this mine he has recently dispose I of to several of the leading Cobalt finanof to several of the leading Count finan-ciers. Mf. Blisky has interests in several other claims, but at present 's confining himself chiefly to the Davis Consolidated Mining Company, of which he is secre-tify. This company is made up princi-pally of American holders, several of whom are Philadelphians. The Davis Consolidated owns over 1200 acres in New Ontorio and Quebec. A. P. Davis of Philadelphia, one of those having a large interest in this company is also owner of two smelters in the United States, and it is his intention to establish a smelter in close proximity to some of the Davis claims, which will treat upwords of 100 tons of ore a day.

Word was received yesterday that the word was received yesterany that the new machinery for he Beaver Mine was now all on the ground, and that installation would commence at once. The machinery consists of an 80 horsepower boliver of the commence of the comme er and a duplex compressor plant, one-half of which will be immediately put in to run six air drills. With the installation of the machinery, the Beaver will shortly take its machinery, the Beaver will snortly take its place among the regular shipping mines.

The old Beaver stock is being rapidly exchanged for the new and as the time limit for this exchange of stock expires on the stock of the stoc exchanged for this exchange of stock expires on limit for this exchange of stock expires on Friday next, those who have not already sent in their stock should do so at once.

and is timbered. This shaft is sunk on a 12-inch vein of decomposed matter carrying good silver valus, an dthey will to down 140 feet before drifting. Shaft No. 2 is down 40 feet, and is being sunk on a very rich 7-inch calcite vein. Ore is being sucked here as they go down. Shaft No. 3 is down 20 feet, and is sunk on an 8-inch vein of cobalt and incoolite. No. 4 shaft is only down about 4 feet, and is being sunk on an 8-inch vein of decomposed calis only down about 4 feet, and is being sunk on an 8-inch vein of decomposed calcite, and at the bottom of their working a good cobalt vein is shewn up and lots of bloom. Shaft No. 5 has only just been attacked.

Questions Being Asked. so that the find was really made on vein No. 2. It consists of 4 linehes of calcite and silver, and is considered very good by all that have seen it. This property looks good, and the battering the stock has received reflects more strongly on the insiders who have thrown their stock on the market than on the property. "Does the president still hold his stock?" is frequently asked in camp. Hundreds of Confidence bought this stock at \$1.70, and had

With Opening of Spring Progress is Being Made on Many Cobalt Properties.

Cobalt, April 9.—(From the Man on the Spot.)—The most important find of the past week was the latest discovery at Peterson Lake, where a new vein was found about 8 feet from the vein on which the men were vorking. The new vein runs parallel to the ther one, and both come from the Nipissing property. The superintendent in charge thinks that these two veins may possibly unite and prove a continuation of the Nipissing Bonanza vein. The ore is largely calcite, heavily shot with sliver. The work being done by the Lake Company is proving useful to the Nipissing, as their shore is being well proving as heir shore is being well prospected.

The water from the hillside is running lown so quickly that the trench where upt Madden has a gang of men at work s filled with water. A sluice is being s filled with water. A style is being wilt, and a water trough that will direct he water away, and work will be countinued. Tests will also be made on the pacsite side of the lake, and here Mr. adden will be benefited by the work done by the Nova Scotia Company, as their rich

eins have been traced almost to the lake more, and all that will be necessary is to Work Being Rushed At the Cobalt Lake Company property, At the Cobalt Lake Company property, over sixty men are at work, probably seventy. Their buildings are being justed. The frame-work of the power-house is half up, and the concrete floors all finished. The frame-work of the sleeping camp is about up, and the ore-house, blicksmith shops and office are completed. They have moved the derricks and small steam plant off the free and set them up on the shore line. A garg of men is still at work on the ice making frames and shaft timbers, but the work in future will be done on the shore, or coast line and underground. Five shafts are being sunk. Shaft No. 1 is near the Nipissing. It is down 40 feet, and is timbered. This shaft is sunk on a 12-inch yell of decomposed matter carry-

At the Green-Mechan a good strike was made last week at the 60-foot level in the made last week at the 60-root level in the drift at the 50-root level, in shaft No. 1 on vein No. 1. Veins 1 and 2 cross each other, and the drift is on vein No. 2, so that the find was really made on vein 10.

ballers bought this stock at \$1.70, and had price-4) cents per share. balters bought this stock at \$1.70, and had to fight to get it.

Will the Portage Bay extension make good this summer? A great many people think it will, and much genuine development work is being done there. No startling fluds have been made, but the valities increase with depth, and that is all that the strongest supporters of this end of the the strongest supporters of this end of the camp have looked for.

At the Imperial Cobalt a three-drill camp buildings are erected. The Elk Lake

camp have looked for.

At the Imperial Cobalt a three-drill straight line air compressor is being installed, and a 60 horsepower boiler will be set up immediately. Their main shaft is now down a depth of 75 feet, and is well timbered, and has 150 feet of cross-cutting and driffting. Thirty men are kept at work, and the ore is said to be improving in silver values. They are working on two veins one of which had a surface showing of 4 inches of cobalt.

At the Cobalt Chief their main shaft is now down 90 feet, and as the vein dipped they are now cross-cutting to find it. They are working might and day shifts. Fifteen feet of cross-cutting have been done, and twenty men are kept at work here all the time.

Progress at Aberdeen.

At the Abardeen Mine a large game is

ably supplied that men sometimes have to stend around a couple of days to find out whether they can file an application or

cetting have been done, and twenty mentars kept at work here all the time.

Progress at Aberdeen.

At the Aberdeen Mine a large gang is at work, and the new camp fouldings are nearly completed. Their main shaft is down 40 feet, and night and day shifts are kept at work. The work here is hand drilling at present, but the intention is to install a small plant.

At the Cobaft Union two shifts are employed, and their shaft is down 35 feet. This property adjoins the Aberdeen, and its owners are well thought of in camp.

Down in the Cross Lake extension, the Temiskaming is so good that any property in that section can be sold rendity to-day, and will brings a big figure. Superintendent at Harman is doing good work, and two carloads of ore will be shipped probably next week. A huge 750 pound nugget was knownlay and will brings a big figure. Superintendent there is a doing and placed in the office of H. H. Long last Friday. It is a mass of silver.

The Progress Mine, the Cochrane and many other properties in this section are well worth visiting. The Beaver, by reason of the rich discovery on the Temiskaming, and the large local holding of its stock, is being watched carefully by Cobalters, who have no fault to find with the personnel of the present management. At the Silver Queen there must be 80 tons of ore ready for shipment, and this preperty is in first-class shape.
