to \$6.00 per cwt. for selects, \$5.85 for fat and \$5.50 for lights. The market is firm at these quotations. Receipts have been very large of late.

## HORSES

There is a good demand for nearly all kinds of horses, especially good sound serviceable working horses. Good, well broken draft horses bring all the way from \$125 to \$225 each at the Repository. Horse Dealers, however, complain that farmers are asking too much for horses, and more than they can afford to pay, especially for those not in market trim. There is also a good business doing in Montreal, especially for the better class of heavy workers. Some choice heavy workers have sold there recently at \$225 to \$275 each, and at \$150 to \$175 for less desirable ones.

## Fruit Institute Meetings

Supt. Putnam has arranged for fruit institute meetings to be held as follows: March 22nd, Ingersoll; 23rd, Norwich; 24th, Cainsville; 25th, Oakville; 27th, Clarkson; 28th, Ingleton; 29th, Churchill; 30th, Collingwood; 31st, Thornbury; April 1st, Meaford; 3rd, Owen Sound; 4th, Allanford. Delegates—A. E. Sherrington and P. J. Carey.

March 20th, Tupper; 21st, Northwood; 22nd, Dutton; 23rd, Spartan; 24th, Appin; 25th, Ilderton; 27th, Parkhill; 28th, Goderich; 29th, Blyth; 30th, Brussels; 31st, Lucknow; April 1st, Walkerton; 3rd, Paisley; 4th, Port Elgin. Delegates—D. Johnson and A. Gifford.

## Contributors to Guelph Sale

The animals to be offered at the Guelph sale on March 22nd have been carefully selected, and will be found to be of superior quality. The 75 entered are from such breeders as E. Jeffa & J. S. Bondhead; Geo. Amos, Moffatt; J. L. Howard and T. Scott, Stratford West, and H. K. Fairbairn, Thorford, and others equally prominent. Three Herefords, from the herd of A. Gowanlock, Forest, will be offered.

## Agricultural Missionaries

A somewhat unique organization has recently been incorporated in Wright County, Quebec. It is a sort of missionary organization and has a capital stock of \$100,000. One of its main objects is to encourage and develop colonization by the establishment of schools for the purpose of imparting scientific and practical agricultural knowledge to people wishing to study this branch of science; to establish missions for the purpose of delivering training and other lectures on religious, public and on agricultural and industrial sciences; to establish orphanages wherein the above services are to be taught to the inmates, so as to enable them to adopt a trade or give themselves up to the practice of agriculture and industrial sciences and become useful members of society.

The headquarters of the association will be at St. Alexandre de la Gatineau, Que.

## The 1904 Clover Seed Crop

It is difficult in any year to make a close estimate of the supply of Alsike and Red Clover seed until the season for threshing is well advanced. As a part of their work the instructors in seed growing, who are employed by the Seed Branch of the Ontario Department of Agriculture at Ottawa, collect information and make observations regarding the conditions of this as well as other crops during the growing season.

From the available information at this time, it would seem clear that the total output of Red Clover seed produced in the Province of Ontario will prove to be rather less than two-thirds of an average crop. The severe winter of 1903-4, combined with prolonged drought in many of the districts where clover seed is most extensively grown, was exceedingly unfavorable to the clover crop of 1904. In consequence, the area left for the purpose of seed production was considerably less than in former years. The clover seed meadow was also much in evidence in nearly all of the districts in Ontario.

The Alsike crop fared even worse than the Red Clover. Not only is the available supply of home-grown seed limited, but the quality of the seed produced this year is, on the whole, inferior. —W. A. C.

## Sugar Beets Pay

As far as I am concerned I would like to see the sugar factory supported by the farmers. We, as farmers, should look ahead. The first year I had five acres yielding about nine tons to the acre. This year I had seven acres which yielded over one hundred tons, that averaged me \$5.00 per ton, upon which I had a 7 1/2 cent outlay of about \$3.00 per acre. How many farmers keep an account of the cost of the production of a grain crop? But most farmers keep an account of the cost of production of their beet crop. After beets I have always sowed oats or barley, which has been a good crop. My beet crop this year, as far as I have been able to figure, has yielded me \$90 per acre. Figuring the cost of production and delivering
