

NEWS IN BRIEF Want Instruction for Fishermen

Four cases were disposed of by Judge McMahon at Saturday morning's sitting of his court, three being those of workmen who suffered death through various accidents while engaged in their labors during the week, and the fourth case that of a baby, which, while being taken in an automobile to a doctor for treatment, fell from its mother's arms when the machine jolted, and was so badly injured that it died.

The coolness and bravery of Louis Renaud, 35 years of age, of 584 Ontario Avenue, was responsible for saving the life of a Swiss, giving his name as Dona Jeronimi, who in an admitted attempt to end his life, sprang into the waters of the upper level reservoir on the Mountain. Renaud, who was passing, jumped in after the desperate man and succeeded in hauling him to safety, later turning him over to the police.

Following a fight in the Calvary Baptist Church in West 57th street, New York, with John D. Rockefeller and his son attending, Brock White and fifteen of his followers from the Church of the Social Revolution were elected at 11:40 o'clock Sunday morning and ten of the members of the church with them were arrested. They spent the afternoon in cells in the West 47th street police station and then they were taken to the court. One of the persons arrested was a woman who was charged with her husband with creating a disturbance in the church. Two of the men arrested fought with the ushers who attempted to eject them and both sides required the services of an ambulance surgeon when they got to the sidewalk.

Mme. Lillian Nordica, the singer, died at Batavia, Java, on Sunday. Mme. Nordica had been ill since the steamer Tasman on which she was a passenger, went ashore on Bramble Cay, in the Gulf of Papua, December 23 last. Nervous prostration, due to her experiences, was followed by pneumonia.

Dependent because of continued illness and the failure of surgery to relieve him of a stomach disorder, Charles W. Post, the well-known publisher of cereal foods, whose headquarters were at Battle Creek, Mich., shot and killed himself in his winter home at Santa Barbara, Cal., Saturday. He had smuggled a rifle into his room, and while his wife and nurse were absent, stretched himself on the bed, put the rifle to his head and pulled the trigger with his foot.

Blanche Dubois, a nineteen-year-old Quebec girl, joint proprietor with her brother of a boot and shoe business in Quebec, was found murdered in the rear of her store Sunday morning. Two people are under suspicion.

The Russian Imperial edict creating hereditary nobility for the diplomatic corps became a practical reality yesterday by the arrival of Mr. Serge de Litschew, who is of an old noble family, a chamberlain to the czar of all the Russias, as well as the Emperor's consul-general in the Dominion of Canada. He says that Russia's financial position is particularly favorable, the country generally prosperous, foreign relations all right, and everything pointing to a long period of national prosperity.

Scores of passengers on the G. T. R. express, Portland to Montreal, had miraculous escapes from death in a wreck which took place a mile and a half east of Richmond, Que., at 4 o'clock Saturday afternoon. The train was speeding along when the tender jumped the track, derailing baggage, second-class and first-class coaches, and sending them into a ditch. Of the seven injured, Mrs. John May, of Sherbrooke, was the most serious sufferer. Her shoulder was badly injured, and she sustained several bruises. The others were all able to walk after their injuries were dressed. The coaches were all badly smashed. Wrecking trains from Montreal and Island Pond were sent for, and it was near midnight before the track was cleared.

**THERMOMETERS.** The difference in the numbering of the Fahrenheit and the centigrade thermometers is a difference in principle, that between circular measure and the neat simplicity of the decimal system. When Fahrenheit had found that his thermometer was capable of giving him a means of measuring heat the necessity for a scale presented itself. He was able to establish two constants of temperature—that at which a mixture of salt and snow melts at one end of the scale, that at which water boils at sea level establishes the other. Evidently with some reference to the fact that in circular measure the maximum distance possible to measure from one point to another is 180 degrees, he scaled 180 equal parts between these two limits. He scaled the thermometer below his freezing point to its reading on a winter day colder than the oldest inhabitant could remember to have experienced. It chanced to be 32 degrees below his freezing point.

The centigrade, on the other hand, establishes its zero at freezing point, and 100 degrees at the boiling point. These constants are selected because they may be so conveniently reproduced at any time, and therefore obviate the necessity of maintaining an official standard of length and capacity.—New York Sun.

N. S. Merchants Urge Technical Education In Import Industry

Halifax, N.S., May 11.—Leading fish merchants in Halifax and through Nova Scotia, are urging upon the Government the importance of providing some kind of system of technical education for fishermen. It is urged that notwithstanding the fact that one person out of every fifteen in Canada depends on the fish industry for a living, there is practically no provision made for the technical education of the men who are engaged in curing and catching the fish. It is also pointed out that Canada's fisheries yield a value of over \$30,000,000 yearly, without the counting of quantities of fish that are used for home consumption, the value of which is estimated at \$10,000,000. Almost 100,000 persons are directly employed in the fish industry, and also there is a large number of men who obtain employment through it in such ways as boat building, sailmaking, rigging vessels, blacksmiths, building masts, the work of transportation, supplies and ice dealing and retailing all over the province. It is roughly estimated the people that depend upon the fisheries in this country for their living number half a million people.

**GREAT SOURCE OF WEALTH**  
Although Fisheries Contribute \$30,000,000 to Wealth of Dominion No Money Has Yet Been Spent by Government—Some Proposals.

(Special Correspondence.)  
Halifax, N.S., May 11.—The coming celebration in Prince Edward Island of the initial steps to confederation is being looked forward to with enthusiasm by the entire population of the Island. Next September it will be fifty years from the time the first conference was held in Charlottetown with the object of uniting the three Maritime Provinces.

**INCREASE IN EXPORTS.**  
St. John, N.B., May 11.—Exports from St. John to the United States during the first three months of this year amounted in value to \$513,254.55, which is an increase of over \$80,000 compared with the first three months of 1913. The principal exports were pulp and lumber, skins, hides, fish and tea, while other loose exports were potatoes, milk, hay and poultry.

**NEW COLUMBIAN COMPANY.**  
(Special Correspondence.)  
St. John, N.B., May 11.—Articles of incorporation have been filed by Messrs. John H. Gorman, R. C. Gilmore, Oscar Ring, E. C. Weyman and Mrs. E. M. Gorman, of St. John, of the Atlantic Construction Company, Limited, with a capitalization of \$48,000, with head offices in this city.

**FISHERMEN OPPOSE DAM.**  
(Special Correspondence.)  
St. John, N.B., May 11.—The fishermen of the harbor are aroused over the project of the St. John River Hydro-Electric Company to build a dam across the St. John River at Meductoc, between Fredericton and Woodstock. The fishermen claiming that a dam across the river would destroy the salmon fishing in the harbor and at Dorville. The lumber companies are also opposed to the project. The fishermen have made a vigorous protest to the Legislature.

COPPER MINE REOPENED Happenings in World of Sport

The Lamarek copper mine, Michigan, is again in operation after being closed nearly a year. The Lamarek is the deepest mine in America. One of the vertical shafts is a little over a mile deep and another is 5,253 feet. The company has paid \$420,000 in dividends, but owing to the great depth of the workings and the low-grade character of the ore, the margin of profit is so small that it was impossible to operate during the recent strike. The other Michigan copper mines all resumed operations months ago, and recently the Lamarek last July has been called off. Now the strikers are clamoring for work. A number of them will be given work by the re-opening of the Lamarek mine.

**CONFIDENCE BEATEN**  
The Wasp and Sky Scrapper Both Defeat Their Famous Stable Mate at Concluding Session of Most Successful Horse Show.

Jersey City and Montreal again ran to their innings yesterday afternoon at the Shamrock grounds when the Sky Scrapper had to go ten times to defeat the Royals. The home club broke even on the double-header, for after losing the first 4 to 6, they grabbed the second 5 to 2. Saturday's fixture also netted a victory for the home club by 4 to 3.

Hollinger Pool Still in Force

Prevents Embarrassment in Event of Death of any of Original Nine Incorporations

RESOURCES INCREASE  
Ten Per Cent. of Stock is Held by General Manager Robbins and Men Employed at Mine.

In a special bulletin to his clients Hamilton B. Wills, of the Standard Stock Exchange, Toronto, sets at rest the rumors being circulated to the effect that the Hollinger pool would soon be marketed, which in a measure explains the recent weakness in the security.

"A perusal of the official list of Hollinger shareholders shows conclusively the utter fallacy of rumors currently regarding Mr. Duncan McMartin's holdings in this company coming on the market."

"As a matter of fact," continues Mr. Wills, "the records show the Canadian Mining and Finance Company, composed of the original owners of the Hollinger Mine, i.e., John McMartin, the late Duncan McMartin, Henry Timmins, Noah Timmins, and David Dunlop, own 26 2/3 shares of Hollinger stock, also that each of the above-named gentlemen hold only sufficient stock in their names to qualify as directors. The late Duncan McMartin is credited as holding one share."

**Pool Was Renewed.**  
"At the time of the incorporation of the Hollinger Mines, the Canadian Mining and Finance Company was formed as the holding company and the syndicate shares were pooled until February of this year. This pool was renewed for an additional five years from last February by order to prevent complications arising to embarrass the market in the event of the death of any of the original five incorporators."

"The wisdom of this action can now be appreciated as the recent death of Mr. Duncan McMartin was totally unexpected."

**Held by Friends.**  
"Outside of the Canadian Mining and Finance holdings in Hollinger there are 29,288 shares outstanding, and a cursory examination of the company's official records show more than 60 per cent of this amount of stock is held by friends and close associates of the five gentlemen above named, also that over 10 per cent of the stock is held by General Manager Robbins, and men employed at the Hollinger mine."

"The holdings of the outside investing public, would not, therefore, total more than 75,000 shares, the major portion of which is considered a meretricious investment and thus not available for market purposes."

**Below Actual Values.**  
"With this point absolutely cleared up, it will be seen that the recent unwarranted drop in Hollinger shares was totally unwarranted."

"With the monthly production figures being maintained well over the year-weekly dividend distributed; the million dollar mark rapidly being reached in treasury resources; and underground development continuing to bring in sight over double the amount of tonnage milled, prevailing prices in the market are far below actual demonstrated mine values, and a sharp upward movement will soon be recorded."

**GENERAL PETROLEUM**  
Company Reported To Have Defaulted \$370,000 May Interest.

New York, May 11.—Following reports from California that the General Petroleum Company, the control of which has gone over to the Western Ocean Syndicate, Limited, comprising English interests, had defaulted its May interest amounting to \$370,000, after it had been tacitly agreed that the British interests should meet the payment, it is hinted that bondholders, owning \$500,000 of the company's securities, have laid plans to form a protective committee, and that some of the members have opened negotiations with the Standard Oil Company of California.

The Standard Oil Company of California's attitude would be very important in the event of General Petroleum property being sold under an order of the court.

Little chance of this situation developing is anticipated, however, as no parties until the interest is six months in default, and it is thought that the Western Ocean Company will make the default of \$370,000 good before November 1st, when the attachment would be made.

**AMERICAN STEEL FOUNDRIES.**  
Steel Foundries Co. reports for the quarter ended March 31 last:  
Earnings from operations . . . . . \$4,291  
Depreciation . . . . . \$47,299  
Debit . . . . . \$1,948  
Other Income . . . . . \$18,150  
Deficit . . . . . \$17,102  
Interest in Deb. . . . . \$30,825  
Total . . . . . \$57,927  
Deficit . . . . . \$45,753

**THE HARVESTER BOYS INVENTION.**  
In 1820 Obed Hussey of Ohio was inventing a reaping machine. His chief difficulty was the cutting device, which was three large sickles, set in a frame and revolved so as to cut into the grain. A young neighbor, watching the experiments, asked his father why he did not use a lot of big scissars, with one handle fastened to one bar, and the other handle to sliding bar, thus opening and closing them. Hussey instantly adopted the idea, substituting for scissars the two saw-toothed blades which are in common use today. From the boy's suggestion he perfected a frame and revolved so as to cut into the grain. A young neighbor, watching the experiments, asked his father why he did not use a lot of big scissars, with one handle fastened to one bar, and the other handle to sliding bar, thus opening and closing them. Hussey instantly adopted the idea, substituting for scissars the two saw-toothed blades which are in common use today. From the boy's suggestion he perfected a frame and revolved so as to cut into the grain.
