Questions and Answers. Miscellaneous.

Trouble in the Strawberry and Raspberry Fields.

1. I have been growing strawberries and raspberries for the past few years with some success, but these last two years I have met with a serious setback, and I am now looking to "The Advocate" to help me out of the trouble by informing me of the cause and cure.

For the winter of 1914-15 I depended upon fences to hold the snow on my strawberry field, in place of a mulch, but it happened that the snow went off extra early in the spring of 1915 which allowed of much thawing and freezing. About 80 per cent. perished. Of course, the first thing anyone would naturally think, and say, would be "winter-killed." Perhaps they were, but taking some existing facts in the case into consideration, I think there is some reason for my idea that there may have been some other trouble there. In the first place, I have seen somewhere in print that freezing will not injure strawberry plants to any extent, except through heaving. In my case they were not heaved, nor were any roots broken. The roots of those not killed outright, were of a dark, rusty color from the crown down. That looks all right from the freezing point of view. I set a number of those plants, affected as above mentioned, but only a few of them lived, and a very few did real well and produced good healthy young plants. This time I mulched after freezing in December 1915. Now, why did those healthy young plants so mulched come out this spring very little better than those unmulched and supposed to be winter-killed? I raised some of them for planting and found them with rusty roots (though not so bad as the unmulched). Very few of them grew this spring. Is all this due to the first year's supposed winter-killing, or is it some disease? I have heard of leaf rust, but I never heard of root rust. Please tell me the cause and cure.

2. There has been, for the past two or three years, something among my raspberries which eats a narrow, perfect circle around near the top of the young canes, causing the top to die, and drop off. I don't consider that in itself very serious, but this spring a large percentage of my canes which had not been attacked at all last year were dead, and more of those not dead to begin with this spring died after coming into leaf, and some later in bloom, and with small fruit on. This took half my crop this year, and if it gets any worse it will place profit out of reach. Some of the dead canes which I examined contained a very small grub in the center. Is it the same enemy which produces these two effects, and how must I attack it to properly rid the field of the trouble? W. J.

Ans.—1. We have heard no complaints from strawberry growers regarding such a disease. It is quite probable that the plants were killed and injured by the unfavorable spring season of 1915. While freezing may not injure strawberry plants, to any great extent, intermittent freezing and thawing will. Possibly the plants were weakened to such an extent that they could not thrive after the severe setback. We would advise our correspondent to prepare a good piece of soil and set it with plants from a healthy plantation. With proper mulching we believe the difficulty will be overcome.

2. The injury done to the raspberry patch is the work of the raspberry cane-borer. This insect makes two girdles around the cane about one-half inch apart, and between these two circles the eggs are laid. This causes the top or injured portion to wilt and die. The egg hatches and the larva or small worm bores down into the pith of the cane. The beetles appear on the wing about the month of June. The female proceeds to deposit her eggs in the canes after making the girdles. The supply of sap being impeded or stopped the tip of the cane above the upper ring soon begins to droop and wither and shortly dies. The young larva after hatching burrows down the centre of the stem, consuming the pith, until full grown, which is usually about the end of August,

Doctor Tells How to Strengthen Eyesight 50 per cent. In One Week's Time in Many Instances

A Free Prescription You Can Have Filled and Use at Home

Philadelphia, Pa. Do you wear glasses? Are you a victim of eye strain or other eye weaknesses? If so, you will be glad to know that according to Dr. Lewis there is real hope for you. Many whose eyes were failing say they have had their eyes restored through the principle of this wonderful free prescription. One man says, after trying it: "I was almost blind; could not see to read at all. Now I can read everything without any glasses, and my eyes do not water any more. At night they would pain dreadfully; now they feel fine all the time. It was like a miracle to me." A lady who used it says: "The atmosphere seemed hazy with or without glasses, but after using this prescription for fifteen days everything seems clear. I can even read fine print without glasses." It is believed that thousands who wear glasses can now discard them in a reasonable time and multitudes more will be able to strengthen their eyes so as to be spared the trouble and expense of ever getting glasses. Eye troubles of many descriptions may be wonderfully benefited by

following the simple rules. Here is the prescription: Go to any active drug store and get a bottle of Bon-Opto tablets. Drop one Bon-Opto tablet in a fourth of a glass of water and allow to dissolve. With this liquid bathe the eyes two to four times daily. You should notice your eyes clear up perceptibly right from the start and inflammation will quickly disappear. If your eyes are bothering you, even a little, take steps to save them now before it is too late. Many hopelessly blind might have been saved if they had cared for their eyes in time.

Note—Another prominent physician to whom the above article was submitted, said: "Bon-Opto is a very remarkable remedy. Its constituent ingredients are well known to eminent eye specialists and widely prescribed by them. The manufacturers guarantee it to strengthen eye sight 50 per cent. in one week's time in many instances or refund the money. It can be obtained from any good druggist and is one of the very few preparations I feel should be kept on hand for regular use in almost every family."

The Valmas Drug Co., Store No. 9, Toronto, will send a complete Home Treatment outfit—tablets, eye cup, mixing bottle, and all for \$1.00 by Mail, postpaid.

Willowbank Stock Farm Shorthorn Herd Established 1855. This large and old established herd has at the head the two great bulls: Imported Roan Chief =60865=, a Butterfly, and the prize-winning bull, Bowndale =80112=, a Mina. An extra good lot of young stock to offer of either sex. Splendid condition. Good families of both milking strain and beef. JAMES DOUGLAS, Caledonia, Ont.

Maple Grange Shorthorns Pure Scotch and Scotch-topped. Breeding unsurpassed. A nice selection in young bulls, and a limited number of thick, mossy heifers. R. J. DOYLE, Owen Sound, Ontario
