

The High Cost of Living

Continued from Page 10

An enormous volume of new capital has during the last decade been sent forth from creditor nations of Europe to the development of new countries on other continents. A great deal of this money has been invested in railway construction and other development work which is not immediately productive. This, however, serves to open up large areas of country with vast natural resources, which will eventually produce increased supplies of food and material and in time possibly produce a reduction in prices. But for the time being this development work involves a reduction of the capital and labor directly available for producing foods and other consumable goods, and the men engaged in such work have to be supported and their maintenance, while they are not producing goods immediately marketable, is an additional strain upon the productive industries of the world. In fact, a temporary state has arisen which particularly affects Canada whereby a more than usually large proportion of productive energy is being applied to make possible future sources of production and a smaller proportion to processes of immediate production of goods. But the fact that Canada is devoting her energies to the development of future productive sources is no reason why during the time of strain she should not proceed to remove the high tariff which is never likely to produce any development of production worthy of the sacrifice involved by it upon the mass of the community.

MANITOBA PLOWING MATCH

The annual provincial plowing match of Manitoba will be held at Portage la Prairie on June 24. The Department of Agriculture is supporting this institution, and \$1,200 is being offered in cash prizes in addition to six silver cups and two gold medals. The plowing match will be supervised by the Portage Plowing Association, together with the co-operation of the Extension Department of the Manitoba Agricultural College.

A WESTERN INDUSTRY

Medicine Hat, Alta., April 23.—Gilbert Hunt and associates of Walla Walla, Wash., today signed a contract with the municipality of Dauntless to build a big plant for the manufacture of threshing machines, feed grinders and other farm implements. This industry, which will be known as the Dominion Harvester Company, is the first of its kind in Western Canada, and will supply parts for repairs as well as the new machines. The plant will ultimately employ about 500 men, and will represent an investment of \$750,000. Construction is to start within two or three weeks.

The only freedom I care about is the freedom to do right; the freedom to do wrong I am ready to part with on the cheapest terms to anyone who will take it off me.—Huxley.
