NEW YORK SUGAR MARKET.

Sugar—Raw quiet; fair refining, 3.42c. centrifugal. 96 test, 3.92c; molasses sugar, 3.17c; refined steady.

Description of the continued on slaught on Temiskaming, the price of which jumped around the board in a very erratic manner. Heavy offerings on the Standard sent it down from the opening price of \$1.26 to \$1.20, while on the curb it receded from \$1.28 to \$1.21. A rally brought the price up to \$1.27, but it was not well sustain. to \$1.27, but it was not well sustain-ed and the closing was at \$1.231-2 on the exchange and \$1.25 on the curb. Over 20,000 shares of City of Cobalt were thrown on the market and the price broke from 56c to 54c. Trethewey, on the other hand, was stronger and on the Toronto Exchange a block of 1,000 shares sold at \$1.51.

## MARKET EXPERTS TALK.

Topics: The weaker tendency in wheat and the more peaceful news from Turkey are matters that make for considerable optimism in financial circles where it is believed the prevalence of the control of th Scotia—200 at 50 1-2.

Tuesday Morning Sales.

Assimple and effective remedy for SORE THROATS AND COUGHS

To some They combine the symmicial value of Cresoleme with the socking properties of slippery elm and liconfurnity in the socking properties of slippery elm and liconfurn

and these, especially N. P. and B. & O., seem on verge of quick rise. Of the cheap shares we still favor Den., W. Z., and M. O. P., and this group should be more prominent during the week. On the dips we would buy Harriman's for turns, though U. P. may take up the leadership at any time. For the long pull we favor B. R. T., A. F., A. L. O., W. U., Con. Gas, and P. O. On soft spots buy Cotton for turns. Wheat is a purchase on any further break.

Summary: Americans in London heavy, 1-8 to 1-2 lower. E. H. Harriman contemplates three-months' trip to Europe. Serious car strike threatened in Pittsburg. Turkish situation peaceful for the moment, with progressive party apparently in control. Anthractic operators expect early agreement. U. P. state Public Service Commission modifies terms for Erie bond issue. Movement in progress to let in Canadian wheat free, in order to break corner. N. Y. C. annual meeting to-day. Atchison should earn over 12 per cent, on common stock this year. American Beet Sugar profits for year ended March 31 equal to 7 per cent, on common. Check in buying of copper, but prices practically unchanged.—D. J. Co. contemplates three-months' trip to Europe. Serious car strike threatened in Pittsburg. G. T. R. ANNUAL.

President en Good Times—To Borrow More Money.

London, April 21.—The semi-annual meeting of the Grand Trunk Railway of Canada was held here to-day. Sir to Charles Rivers Wilson, president of the line, took a hopeful view of the standard of the content of the line, took a hopeful view of the standard of the career as a sculptor.

Since In the total in Rome.

Miss Edmonia Lewis, the colored sculptor, has lived for so many years abroad, says the Rosary Magazine, the action of the Chippewa tribe in New York, in which State she was born, near Albany, some time about the year a Habany, some time about the year the Chippewa tribe in New York, in which State she was born, near Albany, some time about the year than the Chippewa tribe in New York, in which State she was born, near Albany, some time about the year the Chippewa tribe in New York, in which State she was born, near Albany, some time about the year the Chippewa tribe in New York, in which State she was born, near Albany, some time about the year the Chippewa tribe in New York, in which State she was born, near Albany, some time about the year the Chippewa tribe in New York, in which State she was born, near Albany, some time about the year the Chippewa tribe in New York, in which State she was born, near Albany, some time about the year the chippewa tribe in New York, in which State she was born near the subjects of the same t

## The First Lifeboat.

Some may be surprised to learn that the first lifeboat, especially of the style of those adopted at the present time, is still in existence at Redear, in Yorkshire. still in existence at Redear, in Yorkshire. This boat was placed at Redear in the year 1802 to be used as a boat "for saving life in storms or other dangers to ships," coming into or near the mouth of the Tees. It was built by a shipwright of the neighboring port of Sunderland from plans of his own invention, and Parliament considered his workso meritorious and advantageous that it voted him a sum of £1,200 as a reward for his time, trouble and ingeniuty. This fine old boat did excellent service for over seventy years, and then, owing to the introduction of newer types and better boats, it was placed upon the "retired list," and transferred to the shed where it now is.—Fro mthe Windsor Magazine.

Youthful Japanese Horseman.

Youthful Japanese Horsem.a.

Toru Tateishi, 14 years old, son of a prominent lawyer of Fushima city, is appointed by the Government to proceed to Dudapest, Austria-Hungary. The young lad is to learn the art of horse riding, of which he is an expert. All his expenses will be paid by the Department of Agriculture and Commerce.

The boy's mother, a bright and courageous woman, filled with Samurai spirit, was so pleased with the appointment that on the evening of the son's departure for Tokio she invited a large number of his young friends in honor of her son and bade him farewell at the railroad station in that cheerful, unconcerned way, just as if her son was going cerned way, just as if her son was going for a few days' visit. He is to stay in Europe for three years.—From the Ja-Europe for three pan Advertiser.

Root Formation.

It is an article of faith among fruit growers that a fruit tree must be planted in properly prepared soil, a large, wide, shallow hole, the roots carefully spread out in all directions and arranged near the surface with a slight upward bearing at the ends.

Small quantities of the finer soil are first worked in among the roots, hollow places caused by archings in the stouter roots are filled up, the remainder of the soil is put in, trodden carefully down and the whole left to the compacting influence of the rain. The tree is supported by stakes until it is firmly established.

Spencer U. Piekering, with his recent.

ed by stakes until it is firmly established.

Spencer U. Pickering, with his recent researches, declares that proper tree planting means a small hole, roots doubled up anyhow, the trees stuck in, the soil thrown in and rammed down as for a gate post. With extensive experiments 59 per cent. show in favor of the new simple method, 27 show no difference, and 14 per cent. show against the new way. By whatever criterion the trees are gauged the new method is said to give better results than the orthodox. Although an antagonistic cry has been raised against the revolution theory no practical man has been able to give any reason for the old faith that is in him beyond the fact that it is sanctioned by established custom.

Examination proves that ramming has led to a copious development of fibrous roots. In planting the important thing is to induce fresh root formation, and ramming does this more rapidly than the old way.—From the Chicago Tribune

Oh, the did his best, an' he, and work in a sergeant the control of the

ramming does this more rapidly than the old way.—From the Chicago Tribune.

An Ancient Concrete ridge. An Ancient Concrete - ridge.

In the south of France is a concrete arch bridge known as the Pont du Gard which was erected in year 56 B.C. The concrete in this was not composed of crushed stone or other small aggregate of the variety now employed in concrete bridge work, but was of the old style consisting of alternate layers of large and anall stones, gravel, etc., and of cementitious materials. Vitruvious describes the materials and methods in was before the Christian era, and other writers like Alberti in 1845 and Polladio is ers like Alberti in 1845 and Polladio in 1570 accurately describe the method which "the ancients" (as they call them) a late of the method which "the ancients" (as they call them) employed, "of using boards laid on edge and filling the space between with comment and all sorts of small and large stones mingled together." It is very improbable that the Pout du Gard would have withstood the rigors of climate of the Northern United States, but its actual state of preservation, as well as that of many other specimens of ancient concrete work, proves that if modern work is honestly executed, it will many times outlast any reasonable bond period, so that a very small yearly sinking fund per cent. is all that is required for properly designed and erected concrete work.

It doesn't do much good to play truant from the school of experience.
