ADDRESS:—

JOHN T. MOORE, - - Managing Director.

VERY few who carry a Watch ever think of the delicate complexity of its mechanism, or of the extraordinary and unceasing labour it performs, and how astonishingly well it bears up and does its duty under what would be considered very shabby treatment of almost any other piece of machinery.

There are many who think a Watch ought to run for years without a drop of

OUR oil, who would not think of running a common machine a day without oiling, the wheels of which do but a fraction of the service. The main wheel makes four revolutions in twenty-four hours, or fourteen hundred and sixty in a year. The second, or centre wheel, twenty-four revolutions in twenty-four hours; or, eight thousand seven hundred and sixty in a year. The third wheel, one hundred and ninety-two in twenty-four hours, or fifty-nine thousand and eighty in a year. The

SPECIALTY fourth wheel (which carries the second hand), twenty-four hundred and forty in twenty-four hours; or five hundred and twenty-five thousand six hundred in a year. The fifth, or escape wheel, twelve thousand nine hundred and sixty in twenty-four hours; or, four million, seven hundred and twenty-eight thousand, four hundred evolutions in a year—while the beat or vibrations made in twenty-four hours are three hundred and eighty-eight thousand eight hundred; or one hundred and forty-one million eight hundred and twelve thousand in a year. We make a specialty of supplying Watches that will perform this work correctly. KENT BROS., 168 Yonge Street, Toronto.
