BUTTERFLIES TAKEN AT ORILLIA, ONT.

BY C. E. GRANT.

FIG. 23.

I have been collecting Lepidoptera in Orillia and its vicinity for over thirty years, off and on, and thinking that it would be of interest to my brother collectors to have an idea of the fauna of this district, I send you a list of the diurnal Lepidoptera taken by me as far as identified.

Danaus archippus.—Common from June 5th to October.

Argynnis atlantis.—Common from June 4th to August.

" *cybele*.—Common from June 16th to August 31st.

" *aphrodite*.—Not so common, from June 23rd to August. One specimen of *Argynnis* taken by me presented a very dark appearance, nearly black, on the basal portion of the wings, with a greenish tinge on the outside edge of dark base, supposed to be a melanic female of *cybele*.

Argynnis myrina.—Common; two broods, June and August.
