EARLY MATURITY.

Prof. Thos. Shaw, Formerly of Ontario O. A. C., Tells of Producing Influences.

The chief influences concerned in producing early maturity are, a care-ful selection of animals for breeding iul selection of animals for breeding that have evidenced an aptitude for quick growth when young, furnishing plentiful supplies of suitable food, and breeding from animals at an early age. Selection has a very im-portant bearing upon early matur-ity, especially when supported by liberal supplies of suitable food. In this way advance is continually made upon previous maturity, and when upon previous maturity, and when thus made it may similarly be re-tained. In time, it will become a habit of the system, so fixed, that the tendency is regularly transmit-ted. The difference in the tendency in individual animals to mature ear-

ly is very marked, and should be carefully noted by the person seek-ing to hasten maturity in his flock ing to hasten maturity in his flock or herd. Especially is this true when selecting breeding males. Furnishing plentiful and suitable food supplies is one of the surest means of promoting early maturity. When food is thus supplied, a maxi-mum of growth is secured from day to day and without any cessation in the same until maturity is reached found in every drug store throughout the United States and Canada. To be sure a large amount of advertins ing was necessary in the first instance to bring the remedy to the attention of the public, but everyone familiar with the sub ject knows that advertising alone never the same until maturity is reached. If the supply is insufficient, growth is proportionately retarded, and if

made any article permanently successful. It must have in addition absolute, un-deniable merit, and this the new catarrh made up at all, must be made up at a later period, that is, by prolonging cure certainly possesses in a marked dea later period, that is, by prolonging the period of growth. But stagna-tion in development takes away the capacity for development, conse-quently the size of the animal may be materially lessened when matured. Breeding from animals at an early age will unquestionably hasten ma-turity, and because of this, it has been recommended as a means to this end. But if used at all for such an end it should be used with great cau-tion. If animals are mated while Physicians, who formerly depended upon inhalers, sprays and local washes or oint-ments, now use Stuart's Catarrh Tablets because, as one of the most prominent stated, these tablets contain in pleasant,

convenient form all the really efficient catarrh remedies, such as red gum, blood root and similar antiseptics. They contain no cocaine nor opiate, and are given to little children with entire safety and benefit. Dr. J. J. Reitiger, of Covington, Ky., says: "I suffered from catarrh in ny head and throat every fall, with stoppage of the nose and irritation in the throat affecting my voice and often extending to the stomach. I bought a fifty cent package of Stuart's Catarrh Tablets at my druggist's, carried them in my pocket and used them faithfully, and the way in which they cleared my head and throat was certainly remarkable. I had no catarrh last winter and spring and consider myself entirely free from any catarrhal trouble." Mrs. Jerome Ellison, of Wheeling, W. I. Va., writes: "I suffered from catarrh are given to little children with entire

females produce young while guite immature, the burden is put upon them of completing their own growth and of maintaining their young, and this tends to lessen size. better plan, therefore, is to avoid extremes when determining the age at which animals shall be bred. Great improvement has been effect-

COLOR OF SHIRE HORSES. THE USEFUL ANGORA.

\$1.050 BUCK PASHA COLUMBIA. some day, says Shepherd Boy in Wool Markets and Sheep, As a meat producing animal he will no doubt take his stand with cattle, sheep and hogs in feeding the ever growing meat-eating population of the world, but he is never intended or destined to kill either the beef, mutton or pork trade of this or any other country. When venison is mutton or pork trade of this or any other country. When venison is scarcer and consequently dearer than it is to-day, Angora meat will take its place and give to both the rich and poor epicure a taste of meat which to the writer is indistinguish-able from that of the deer.

The Angora is not destined to kill the wool industry of the world, for the warmth of the sheep's fleed will be always sought by all manner of people in the temperate and frigid zones. His mission is to supply mohair for the manufacturer of delicate fabrics and to clear the brush from of large and small tracts of land extending more or less all over North America.

At the second annual sale of Angora goats recently held at Kansas City the champion buck of the heat solid, big feet, go right to the pock-et and will add hundreds to the val-ue of shire horses when proper diswas bought by Mrs. M. Armer of Kingston, N.M., for the record breaking price of \$1,050. He is a notably fine animal, and experts cretion is exercised in keeping such colts as those here described stallions, whatever their color may be. If we had not had Lincolnshire Lad II., we should not have had consider that he is worth the price,

The question of color in horses has for a long time past raised consider-able discussion in the columns of the London Live Stock Journal, and many interesting letters and notes respecting it have appeared, writes

Importance.

respecting it have appeared, writes a correspondent of that publication. In the majority of cases, however, the chief point considered has been how to get rid of chestnuts, grays and roans, which appear to be the more generally unfavorable colors. Many of the best and weightiest stallions we have had (speaking of the earlier days of breeding) have been of these commonly unpopular colors, and latterly such colts as these, weighty and good, have been these, weighty and good, have been castrated solely on account of their color, the owner not realizing the folly of the thing until he sees his discarded colt selling as a gelding at 150 guineas or more. Then he ex-claims, 'I wish I had never castrat-ed him!' And well he may.

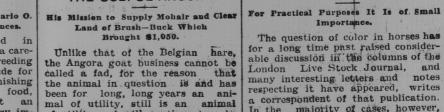

It is no uncommon thing nowa-days to see colts of the highest cali-bre being shelved because they are chestnuts. "They won't buy a chestnut stallion," say those who are in the business. Surely with facts like those herein stated, and which cannot be refuted, staring them in the face breeders will never he so foolish as to continue to discard these fine horses on account of the shade of color that pervades the hair.

This point goes only skin deep, but a well molded body, abundance of substance and muscle, quality and correctly formed joints, bottomed by

ed in recent years in the early matur ing of meat-producing animals. The average age at which they are now put upon the market has been shortened nearly if not quite one-half. Less than half a century ago the favgrain. orite age for marketing cattle was from three to five years; now it is one and one-half to two and one-half years when the cattle are that bran was a rich food, or even a profitable one to feed by itself. But the conclusions reached by the ma-jority of feeders and by all experi-ment stations where tests have been carried out regarding it, are that it is not only a desirable, but also a profitable food when fed in conjuncgrown on arable farms. Wethers were formerly sold at two years and upward; now they are sold at one year and under. Swine were market-ed at 18 months, now they are martion with other grain mixtures. All grain rations should have some that age. It would not be quite cor-rect to say that these respective wheat bran added; it gives bulk to the ration, thus reducing the danger classes of animals attain the aver-age weights of those sold in former of indigestion, The Kansas Experiment Station years, but it is correct to say that they do attain far greater weights found certain manufactured foods unprofitable as compared with grain and hay raised on the farm. at similar ages, and that they may easily be made to attain these weights at the respective ages men-tioned, to meet the favorite require-ments of the market.—Thomas Shaw, in American Agriculturist. In the same way bran or milk is unprofitable to feed alone, but are found to be profitable when fed with other foods just as are the concen-trated stock foods.

Silver Laced Wyandottes.

Packing Cows for Shipping.

modern stock growing, to get the best results in the world's best mar-Vegetables Out of Season.

A man well versed in horticultural lore tells the Farmers' Review that kets Before packing and shipping, poul-

nost of the fruits and vegetables grown in hot houses out of their season are of exceedingly poor fla-vor, though they bring fancy prices on the markets. He says: Cucum-bers thus grown have the color of try should be thoroughly dry and cold, but not frozen. The animal heat should be entirely out of the body. Pack in boxes or barrels ; cucumbers and the shape of cucumbors but that is all. The same boxes holding 100 to 200 pounds are preferable. Pack snugly, straighten out the body and legs so that they is true of tomatoes, which have the ruddy cheeks of those grown in the open fields, but lacking almost enwill not arrive very much bent or twisted out of shape, fill the pack-ages as full as possible to pre-vent moving about on the way, Barrels answer better for chickens and ducks than for turkeys and open neids, but racking almost en-tirely their flavor. Nevertheless, the real test is, from the fruit grower's standpoint, what they will bring in the market, and judged by that test the growing of fruit out of season is to be encouraged.

Harold, and without Harold where would the greatest heavy horse the world knows to-day have been? It is to be hoped that breeders will pom-A prominent writer in one of our English exchanges says: "Bran is not a profitable food. As it is a food der over this matter and not all everyone has to buy, better buy the such absurd whims and fancies as the color of the hair to make them cas-The claim has never been made trate colts that in other respects that bran was a rich food, or even a combine almost every property that

is required. Color for the park and for fancy purposes may have its way, but in the shire horse, an animal that is bred entirely for practical purposes to propel heavy weights in our streets and on our railways as well as on our farms, it ought not to weigh one iota. My advice is, discard the idea at once and breed from the best animal, whatever may be his or her color. To do otherwise would be little better than running a race with one leg tied up. You los half your abilities to perform the task.

Sore Teats

Sore teats is rather vague; it may mean almost anything, as reference to the definition of sore in a diction-In Europe for many years feeders have used these special stock foods, ary will show you, and an ointment that would be good for sore teats by arising from one cause is not neces-sarily good for all. The term is the aid of scientific analysis, preparing special horse food and special foods for dairy cows, for fattening stock, for calves, etc., that large perhaps most frequently applied to chronic erythema, a disease of the skin of the teats in which there are feeders and all classes of stock breed-ers find profitable and desirable to chaps or cracks, with ulcerations of a sluggish character, It may occur under a variety of circumstances, but the trouble is mainly confined to newly calved animals. In cows with very delicate skins this disorder is very liable to develop, and is diffi cult to cure, owing to the necessity for regular milking. Sometimes imperfect removal of the milk on account of the soreness of the teat gives rise to a worse trouble in the shape of mammitis and loss of one or more quarters. Wet milking, and leaving the teats wet in cold weather, is a fertile cause of soreness. The proper thing to do is to treat each case on its merits, but perhaps most useful dressing to keep on hand for general purposes is camphor and elder ointment. Any chemist will supply you with such a compound, or it may be made by mixing one-half ounce of finely-powdered camphor with four ounces of elder oint-ment. Another useful dressing especially when flies are trouble the glycerine and carbolic acid. In many cases it is necessary to draw

off the milk by means of a teat tube or syphon. A laxative dose, twelve to sixteen ounces, of Epsom salts is useful in cases erythema mammill arum .- Farm and Home (Eng.)

Sweeten the Sheds.

Don't forget or delay to give the sheep sheds in and out a coat of hot limewash, adding to it carbolic acid to make . it smell perceptibly. Large sheds should have the earth floor turned over by a plow and then rolled, says American Sheep Breeder. A sprinkling of fine plaster, such as is often used as a fertilizer and by plasterers for hard finish, will neutralize all odor and sweeten the floor. Above all other things, fit up the water troughs in good time and carry off the waste so as to keep the approaches to them dry and free from ice,
